15. Supplementary Notes Prepared in cooperation with the U.S. Department of Transportation, FHWA, from a study of Pedestrian Accidents in Arizona: An Investigation of Causative Factors and Recommendations for Safety Improvements. The opinions and conclusions are those of the authors and not necessarily of ADOT or FHWA.			
16. Abstract This research investigated the causes of pedestrian accidents in Arizona to discover why Arizona's pedestrian accident rate is higher than the national average. All pedestrian accidents for 1981, 1982, and 1983 that were computerized in the state accident report system were examined. All accidents (37,784) that could be located (2.6% could not be located) were plotted by location and reported cause. Accident rates for urban areas were higher than for rural areas. The only identified pattern was that urban accidents and fatalities tend to occur on wide, high speed arterial streets. Causes of approximately 50% of all accidents were failure to yield by motorist or pedestrian and not using a crosswalk. It was concluded that there are no engineering countermeasures that would be useful. Education of the public, particularly children under 14 years of age seems to be the only useful countermeasure. Arizona is heavily urbanized with very little rural population to offset the larger than average rate. The Indian reservations are similar to the rural counties and do not contribute to the high rate, although the rate on Indian reservations is higher than that of the rural counties. Volume I, 67 pages, contains the text and summary figures relevant to the discussion of the results of the research. Volume II contains the appendices.

ACKNOWLEDGEMENTS

This report was prepared as part of project HPR-PL-1(29) Item 210 - "Pedestrian Accidents in Arizona: An Investigation of Causative Factors and Recommendations for Safety." The research was conducted by the Center for Advanced Research in Transportation, Arizona State University, in conjunction with the Arizona Department of Transportation (ADOT) and the U.S. Department of Transportation, Federal Highway Administration (FHWA).

The authors wish to acknowledge the assistance of the following individuals who provided assistance and guidance.

Mr. Roger Hatton	ADOT
Mr. Ron Midkiff	ADOT
Mr. David Olivarez	ADOT
Mr. Richard Nassi	City of Tucson
Mr. John Orrahood	Maricopa County
Mr. Terry Smiley	City of Mesa
Mr. James Matteson	City of Phoenix
Mr. Carlie Bowmer	ADOT
Mr. Nate Banks	FHWA
Mr. Rudolf Kolaja	ADOT

SI (METRIC) UNIT CONVERSION FACTORS

The material contained in this report is presented in terms of English units. The following factors may be used to convert the measures used in this report to the International System of Units (SI):

1 mile per hour (mph) = 1.6093 kilometer per hour (kph)

1 kph = 0.6214 mph

1 foot = 0.3048 meter

1 meter = 3.2808 feet
