UNDERSTANDING AND USING THIS REPORT

WHAT IS IT?

This is the third (1981) annual report from the Urban Mass Transportation Administration's (UMTA) Section 15 Reporting System. It has been developed by UMTA's Office of Technical Assistance, Information Services, and the Transportation Systems Center in order to organize cohesively the extensive financial and operating data submitted to UMTA by the nation's public transit systems. Every effort has been made to present this data in a logical and consistent manner so as to be easily used and understood. There is ample explanatory material on the report's contents, on its usage, and on how to locate specific statistical tables and data.

WHAT DOES IT CONTAIN?

This document contains extensive financial and operating data from 319 of the nation's public transit systems. It includes:

- Two main sections
 - AGGREGATE TRANSIT STATISTICS
 - INDIVIDUAL TRANSIT PROPERTY STATISTICS
- Introductory text for each section
- Statistical tables for each section, grouped by major data category and transit system fleet size
- Appendices
 - list of transit properties sorted alphabetically by State
 - glossary

HOW IS IT ORGANIZED?

This report is organized in the following manner:

- Introductory material describes the individual statistical tables under four major headings:
 - TRANSIT REVENUES
 - TRANSIT EXPENSES
 - NON-FINANCIAL OPERATING DATA
 - PERFORMANCE INDICATORS

- For each of these four main headings, the report contains several statistical tables. For example, under TRANSIT REVENUE, the tables are:
 - Sources of Transit Revenue
 - Sources of Public Operating Assistance
 - Dedicated State and Local Taxes for Operations
 - Sources of Public Capital Assistance
 - Dedicated State and Local Taxes for Capital Assistance
- Statistical tables are broken down further by transit system fleet size; i.e., by the number of revenue vehicles — more than 1000, 500-999, 250-499, etc.

WHY READ THE INTRODUCTIONS?

The Introductions will answer many questions which may come to mind as this report is used, such as:

- How to compare the financial and operating performance of one transit system with another of comparable size.
- How to compare the performance of an individual system with that of the total transit industry.
- How data was developed from the Section 15 transit operating forms.
- How the fleet size of a transit system with different types of vehicles was determined.
- Why there are separate statistical tables for single mode motor bus systems.
- What are the sources of financial assistance from Federal, State or local governments.
- How operating expenses are listed by transportation mode and how they are combined for multimodal transit systems.

HOW GOOD IS THE DATA?

The Section 15 data submitted to UMTA by the transit properties was subjected to extensive validation and analysis, both manual and automated. In spite of this, however, erroneous data may still have found its way into this report. In addition, it should be noted that several smaller transit properties were, for a variety of reasons, exempted from reporting in this year. (These properties are listed in the accompanying Index and Data Guide, page 2-31.) Consequently, care should be taken in the application and use of the data as presented.

Also, three special notes are inserted here as a precaution for comparative evaluation analysis.

Commuter Rail

It is important to be aware that, because of numerous reporting inconsistencies, Commuter Rail data is *not* included in the statistics in this document. UMTA is now taking steps to assure that all future reports will reflect complete Commuter Rail data.

Purchased Transportation

Approximately 5% of the properties reported as single mode motor bus systems when in fact they were providing both fixed route and demand response service. The demand response service was operated through a purchase-of-service agreement. The expense for this service, purchased transportation, was deleted from these reports so that it would not be accurately attributed to motor bus service and therefore jeopardize the validity of the data base. Revenue data was not altered; it reflects actual system revenues.

In order to alleviate confusion and inconsistencies in future reports, UMTA is currently in the process of clarifying the definition of purchased transportation and reviewing the guidelines for its use.

New Jersey Transit Corporation

During fiscal year 1981, New Jersey Transit purchased Transport of New Jersey and their subsidiary Maplewood Equipment Company. New Jersey Transit expanded its role to include the operation and maintenance of approximately 90% of the State's motor bus operations. As a result, for fiscal year 1981, NJTC submitted a consolidated Section 15 report which included financial and operating data for 18 systems that previously reported separately. Sixteen of those 18 properties were reported as purchased transportation service in the NJTC report.

Finally, it should be borne in mind that although the use of the statistics in a comparative evaluation is appealing, analysis of such statistics by themselves is insufficient to account for differences in performance. A more thorough evaluation is required, which moves beyond the statistics, to determine whether the explanation for differences in performance is due to unusual events in the period covered, the operating environment of the transit system, specific management practices, varying labor rates, consumer price index, varying fiscal years, or other important factors which affect transit operations.

MORE INFORMATION ON THE SECTION 15 REPORTING SYSTEMS

It is anticipated that the Table of Contents, the Index and Data Guide, and the various background and explanatory material in the Introductions will prove more than adequate as aids to understanding and using the statistical tables and data in this Annual Report. However, for a more exhaustive description of the Section 15 reporting system, the reader may obtain the report entitled **Urban Mass Transportation Industry Uniform System of Accounts and Records and Reporting System** (UMTA-IT-06-0094-77-1) from the National Technical Information Service (NTIS). The report is in four volumes.

- Volume I — General Description
- Volume II — Uniform System of Accounts and Records
- Volume III — Reporting Forms and Instructions — Required
- Volume IV — Reporting Forms and Instructions — Voluntary

Volumes III and IV have been superseded by the following four individual Section 15 reference manuals, one for each reporting level:

- Volume I — Required Reporting Manual and Sample Forms
- Volume II — Level C Reporting Manual and Sample Forms
- Volume III — Level B Reporting Manual and Sample Forms
- Volume IV — Level A Reporting Manual and Sample Forms

They contain samples of all the Section 15 reporting forms cited in this report together with detailed instructions for filling them out.

Suggested procedures for obtaining the service-consumed data required under Section 15 (e.g., passenger trips, passenger miles, etc.) can be found in the following publications.

UMTA Circular 2710.1 — Sampling Procedures for Obtaining Fixed Route Bus Operating Data Required Under the Section 15 Reporting System.

UMTA Circular 2710.2 — Sampling Procedures for Obtaining Demand Responsive Bus System Operating Data Required Under the Section 15 Reporting System.

UMTA Circular 2710.5A — Section 15 Accounting and Reporting Release No. 2.

It is anticipated that two additional circulars will be issued soon which will describe alternative, less expensive service-consumed data collection tech-

niques. These documents are available to the public through UMTA's Information Services (URT-7).

INDUSTRY-GOVERNMENT COOPERATION

A cooperative working arrangement has developed between the transit industry and the Federal Government on the Section 15 data collection and reporting system. The private and public sectors have recognized the importance of and need for timely and accurate data on which to assess the continued progress of the nation's mass transportation system.

To help promote this cooperative effort, UMTA urges all interested parties (transit operators, State and local governments, planning organizations, the research community, trade unions, etc.) to review and critique this edition of the National Urban Mass Transportation Statistics and forward their comments and suggestions to Director, Information Services, Office of Technical Assistance, Urban Mass Transportation Administration, URT-7, 400 7th Street, S.W., Washington, DC 20590 (202/426-9157).

15. Supplementary Notes					
16. Abstract This report summarizes the financial and operating data submitted annually to the Urban Mass Transportation Administration (UMTA) by the nation's public transit operators, pursuant to Section 15 of the UMT Act of 1964, as amended. The report consists of two sections: Section 1 contains industry aggregate statistics only, while Section 2 contains detailed financial and operating data on individual transit agencies. The current edition contains transit industry statistics compiled from the Section 15 data submitted by the transit agencies for fiscal years ending between July 1, 1980 and June 30, 1981, the third year of operation of the Section 15 reporting system. It is important to note that, due to reporting inconsistencies, commuter rail data is not included in this document.					
17. Key Words Transit Data, Revenues, Expenses, Accidents, Energy Consumption, Maintenance, Employee Count, Vehicle Miles, Vehicle Hours, Passenger Trips, Passenger Miles, Fleet Inventory, Performance Indicators				18. SECTION 1

AGGREGATE TRANSIT STATISTICS

1.1 INTRODUCTION

Section 1 of National Urban Mass Transportation Statistics contains tables of industry aggregate statistics compiled from Section 15 data submitted to UMTA by United States transit systems. Although some of these tables differ in format, many are similar in appearance and contain eight columns. Seven represent different ranges of transit system fleet size, and the eighth, called "All Systems," is for the average percentage or actual value. Further, the subject titles (object class) used for each statistical table are identical to those printed on the Section 15 forms. All of these tables are grouped under four major headings:

- 1.2 Transit Revenues
- 1.3 Transit Expenses
- 1.4 Non-Financial Operating Data
- 1.5 Performance Indicators

These headings and their associated tables are discussed more fully in this and other section introductions.

This entire document, including the Section 1 tables, utilizes a consistent format in order to simplify use of, and locate easily, the required data. Virtually all of the tables of industry aggregate financial and operating data are delineated by transit system fleet size. "Fleet size" is determined by the number of vehicles, in the following manner:

- 1. Transit systems with under 25 revenue vehicles.
- 2. Systems with 25-49 revenue vehicles.
- 3. Systems with 50-99 revenue vehicles.
- 4. Systems with 100-249 revenue vehicles.
- 5. Systems with 250-499 revenue vehicles.
- 6. Systems with 500-999 revenue vehicles.
- 7. Systems with 1,000 and more revenue vehicles.
- 8. All transit systems, regardless of fleet size.

Where data is presented by transit mode, the number of revenue vehicles refers only to that mode's fleet size. Where the data includes all modes, the number of vehicles means the total fleet size.

This division by number of revenue vehicles will enable a transit system to compare its own performance in a particular financial or operational area with the performance of other transit systems of comparable size, as well as with the performance of all systems reporting.

As you read through the various statistical tables, you will note that the subject titles will always correspond to the titles submitted by a transit system on the Section 15 reporting forms (for example, passenger fares for transit service, number of unlinked passenger trips, etc.). The data is listed either by percentages (e.g., percentage of total revenue derived from passenger fares) or by total numbers (e.g., total number of collision accidents on a transit system in one year).

The Section 15 data submitted to UMTA by the transit systems has undergone extensive validation and analysis, both manual and automated, to maintain a high level of accuracy throughout this document. In cases of missing or erroneous data, numbers from a particular transit system were not used in compiling the aggregate statistical tables. Thus, on those tables, the Number of Transit Systems Reporting will be less than the Total Number of Transit Systems.

For cross-reference purposes you will find two helpful Appendices at the end of this document. Appendix A lists all transit systems alphabetically by State. Appendix B is a Glossary.

Additional introductory material is placed conveniently before each of the four major headings to be discussed — Transit Revenues, Transit Expenses, Non-Financial Operating Data, and Performance Indicators.

1.2 TRANSIT REVENUES

Section 1.2 contains five types of statistical tables, each table with separate columns denoting transit system size. These tables are titled:

1. Sources of Transit Revenue.
2. Sources of Public Operating Assistance for Transit.
3. State and Local Taxes Dedicated at Their Source for Transit Operations.
4. Sources of Public Capital Assistance for Transit.
5. State and Local Taxes Dedicated at Their Source for Transit Capital.

Under Section 15 requirements, revenues are reported only by transit system totals, not by individual transit mode. However, since nearly 70% of all transit systems operate only single mode motor bus transit, separate revenue tables are printed for this mode of transit as well as for system totals.

SOURCES OF TRANSIT REVENUES

The first two revenue tables list the sources of transit revenues for single mode motor bus systems and for all systems regardless of transit mode. These tables list the appropriate Section 15 object class code and subject titles (revenue object class).

For clarity, the subject title, **Other Transportation Revenues**, combines Special Transit Fares, School Bus Services, Freight Tariffs, Charter Service, and Auxiliary Transportation.

There are seven data columns for the designated ranges of transit system fleet size and one for all systems. "All Systems," of course, covers all transit system sizes, and number in this column are the average percentage or numerical amount as calculated from the seven transit size categories. In determining the "size" of a transit system, the number of revenue vehicles is the total **number** of motor buses, streetcars, rail rapid, etc. For single mode motor bus transit tables, the All Systems column refers only to that one transit mode.

The data for these tables originates with Forms 201 and 202.

SOURCES OF PUBLIC OPERATING ASSISTANCE

The next two revenue tables report on Sources of Public Operating Assistance for single mode

motor bus systems and for All Systems. Public assistance to transit systems originates from Federal, State and local governments, and the percentages of assistance from these three sources by transit size are listed separately.

The subject titles, such as Section 5, General Revenues, Taxes, etc. under each of the three governmental levels show the percentage of funds for these categories.

Information for these tables comes from Form 203.

DEDICATED STATE AND LOCAL TAXES FOR TRANSIT OPERATIONS

The following two revenue tables list the State and local taxes dedicated at their source, by type of tax, for single mode motor bus systems and for All Systems. Once again, data on dedicated taxes from State government and from local government are listed separately, and the types of taxes — Income, Sales, Property, Payroll, etc. — are presented individually.

Data for these tables was compiled from Form 203.

SOURCES OF PUBLIC CAPITAL ASSISTANCE

The next two revenue tables report on Sources of Public Capital Assistance for single mode motor bus systems and for All Systems. Following a consistent form of presentation, the data is presented by transit system size for different sources of capital assistance (Section 3, General Revenues, etc.), and by whether this assistance comes from Federal, State or local government.

Form 103 was the source of information for these tables.

DEDICATED STATE AND LOCAL TAXES FOR TRANSIT CAPITAL

The last two revenue tables show the percentages of State and local taxes dedicated at their source for transit capital, by type of tax, for motor bus systems and for All Systems. In addition, Total Dedicated Local Taxes are listed, as shown, by millions of dollars.

These figures also were compiled from Form 103.

1.3 TRANSIT EXPENSES

Section 1.3 contains four types of statistical tables:

1. Transit Operating Expenses by Mode and Function by Transit System Size.
2. Transit Operating Expenses by Mode and Object Class by Transit System Size.
3. Operating Expenses by Function and Object Class Single Mode Motor Bus Transit.
4. Employer and Employee Paid Fringe Benefits by Transit System Size.

The transit expense tables provide statistical information about transit expenses not only by fleet size but also by individual transit mode since, under Section 15, expenses are reported by mode as well as by system totals.

EXPENSES BY FUNCTION

The first expense table provides statistical information about transit industry expenditures in four major functional areas: Vehicle Operations, Vehicle Maintenance, Non-Vehicle Maintenance, and General Administration. The information is reported separately for the following modes:

1. Motor Bus
2. Rail Rapid
3. Streetcar
4. Trolleybus
5. Demand Response
6. Ferryboat
7. Other (e.g., Cable Car)

An eighth category, Total All Modes, provides data on aggregate expenditures by function for all modes.

The various fleet size categories (Under 25, 25-49, etc.) indicate modal fleet size (i.e., the number of revenue vehicles in each mode). Only in the category Total All Modes do they refer to total system fleet size. For example, a transit system with 35 motor buses and 20 demand response vehicles, would fall into the following fleet size categories: Motor Bus (25-49); Demand Response (under 25), Total All Modes (50-99).

The data entries are percentages of total operating expenditures by mode for all transit systems in the various modal fleet size categories for the four functional areas (i.e., Vehicle Operations, Vehicle Maintenance, Non-Vehicle Maintenance, and General Administration).

As indicated in the Transit Modes and Functions column, only Total Expenses, which covers total operating expenditures by transit mode and fleet size, is listed by "millions of dollars" rather than by percentage.

The data used to develop this table was compiled from Forms 301, 302, 303, 304, 310, 311, 312, and 313.

EXPENSES BY OBJECT CLASS

The next eight expense tables report on aggregate transit operating expenses by mode and expense object class. There is a separate table for each of the following seven modes: Motor Bus, Rail Rapid, Streetcar, Trolleybus, Demand Response, Ferryboat, and Other (e.g., Cable Car). In addition, there is a table for Joint Expenses and a summary table, Total All Modes. A separate Joint Expenses table is required because, under Section 15, expenses are fully allocated to the individual modes only by function.

The first of these eight tables, Transit Operating Expenses by Mode and Object Class: Details by Transit System Size, Motor Bus, is typical of these modal tables. The data covers the operations of all transit systems, single and multimode, which operate motor buses. The entries in the eight data columns are percentages of total expenditures of motor bus operators by fleet size and by the various expense object classes.

Only the figures for Total Operating Expenses, for total expenditures for motor bus operations by fleet size, are listed by "millions of dollars."

Data for these eight tables comes from Reporting Forms 301-304 and 310-313.

The remaining modal tables are structurally identical to the Motor Bus table. The Joint Expenses table provides statistical data on those operating expenditures of multimodal systems which cannot be assigned directly to a particular mode.

The Total All Modes table provides statistical data on total system expenditures **by expense object class and fleet size**. It is identical to the individual mode and joint expenses tables except for the two additional rows which show **reconciling items** (e.g., interest expenses, leases and rentals, depreciation, etc.) and **total expenses** including reconciling items in million of dollars by fleet size.

Under Section 15, **reconciling items are reported only as system totals and not separately by mode**. Reconciling items are so called because they are needed to provide an overall total which is consistent with local published reports. They are reported separately under Section 15 because local accounting practices for handling such items (particularly depreciation and amortization) differ widely.

Reconciling item data was compiled from Reporting Forms 301, 310-313, and 315.

EXPENSES BY FUNCTION AND OBJECT CLASS

The next **eight** expense tables deal exclusively with single mode motor bus systems. They provide statistical data on operating expenditures by function and expense object class. The first seven represent various fleet size ranges, and the last table is for all-bus systems.

The first of these tables, Operating Expenses by Function and Object Class: Single Mode Motor

Bus Transit, Systems with 1000 and Over Revenue Vehicles is typical of all of them. The data corresponds to the four main functional areas (i.e., Vehicle Operations, Vehicle Maintenance, Non-Vehicle Maintenance and General Administration) and to Total All Functions.

The data entries are **percentages** of total expenditures by functional area for the various expense object classes. Once again, only in the Total All Functions column do these tables show reconciling items and total expenses in "millions of dollars."

Forms 301 and 305-307 were used to compile the data for these tables.

FRINGE BENEFITS

The final expense table is entitled Employer and Employee Paid Fringe Benefits: Details by Transit System Size. This table provides statistical information by fleet size on the various categories of fringe benefits paid separately by transit system employers and employees. The information presented in this table represents **system totals**, since fringe benefit payments are not reported separately by mode. The data entries are **percentages** of the total expenditures for fringe benefits paid by employers and employees.

Data for this table comes from Form 331.

END OF REPORT

1.4 NON-FINANCIAL OPERATING DATA

Section 1.4 contains seven types of statistical tables:

1. Transit Accidents and Energy Consumption: Details by Transit System Size.
2. Revenue Vehicle Maintenance Performance: Details by Transit System Size.
3. Transit Way Mileage: National Summary.
4. Transit System Employee Count: Details by Transit System Size.
5. Aggregate National Transit Operating Statistics: Service Supplied and Service Consumed: Details by Transit System Size (Non-Rail Modes).
6. Aggregate National Transit Operating Statistics: Service Supplied and Service Consumed: Details by Transit System Size (Rail Modes).
7. Summary Age Distribution of Revenue Vehicle Inventory: Details by Mode.

SAFETY AND ENERGY CONSUMPTION

The first series of seven tables report on transit accidents and energy consumption by mode and system fleet size. There is a separate table for each mode (i.e., Motor Bus, Rail Rapid, Streetcar, Trolleybus, Demand Response, Ferryboat, and Other).

The first table in this series, Transit Accidents and Energy Consumption: Details by Transit System Size, Motor Bus, is typical. The upper portion of the table lists the total number of accidents, fatalities, and injuries for the year related to motor bus operations by system fleet size. Accidents, fatalities and injuries are classified as being either Collision, Non-Collision, or Station.

The lower portion of the table reports on the consumption of diesel fuel, gasoline, LPG or LNG, and bunker fuel in millions of gallons, and electric power in millions of kilowatt-hours by fleet size.

The accident and energy consumption data were compiled from Forms 405 and 402, respectively.

TRANSIT MAINTENANCE

The next series of seven tables report on transit maintenance performance by system fleet size. A separate table is provided for each mode. Referring to the first of these tables, Revenue Vehicle Maintenance Performance: Details by Transit System Size, Motor Bus, the upper portion of the table reports on the number of roadcalls for maintenance purposes, while the lower portion provides an inventory of light maintenance facilities.

Roadcalls are classified as being either for mechanical failure or for other reasons. Light maintenance facilities are classified as serving under 200 vehicles, between 200 and 300 vehicles, or more than 300 vehicles.

The data presented in the maintenance tables was compiled from Form 402.

TRANSIT WAY MILEAGE

The next two tables, Transit Way Mileage: National Summary essentially replicates, in format, Form 403. The table reports aggregate transit mileage by transit mode for Rail Rapid, Streetcar, Ferryboat, Motor Bus and Trolleybus for all transit systems regardless of fleet size. It also reports in the number of crossings nationwide for the Rail Rapid and Streetcar modes and on the total number of stations for the Rail Rapid mode.

TRANSIT EMPLOYEE COUNT

The next series of seven statistical tables report transit system employee counts by mode and fleet size. There is a separate table for each mode. The first of these tables, Transit System Employee Count: Details by Transit System Size, Motor Bus, is typical. In the first column of the table appear 10 employee job classifications (e.g., Transportation Executive, Professional and Supervisory Personnel, Transportation Support Personnel, Revenue Vehicle Operators, etc.) Each of these job classifications is further subdivided into two groups: Operating and Capital.

To the extent that an employee works on the capital projects, his labor is considered a capital expense, whereas the labor is considered strictly an operating expense.

In each job category, the number of employees in terms of the number of employee equivalents for the year to the nearest one-tenth employee (one employee equivalent = 2000 labor-hours of work). This accounts for the fractions which appear in the row labeled Total Number of Transit System Employees.

The data entries are **percentages** by system fleet size of the total number of employees in the various job classifications.

The data presented in this table was compiled from Form 404.

TRANSIT OPERATING STATISTICS

The next series of six statistical tables report **aggregate national operating statistics on service supplied and service consumed** by mode and by fleet size. There is a separate table for each mode. It should be noted that the format of the four **non-rail** mode tables (Motor Bus, Trolleybus, Demand Response, and Ferryboat, differs from the format of the rail mode tables (Rapid Rail and Streetcar) in the categories of service supplied.

Specifically, the rail mode tables report both train statistics and passenger car statistics (e.g., Total Annual Train Miles and Total Annual Passenger Car Miles). The ratio of a given passenger car statistic to the corresponding train statistic provides a measure of the average number of passenger cars per train. In addition, the rail mode tables do not report charter service statistics, since this service is rarely provided by rail.

The first of these tables, Aggregate National Transit Operating Statistics: Service Supplied and Service Consumed: Details by Transit System

Size, **Motor Bus** is illustrative. It is divided into two main sections: Service Supplied, and Service Consumed. In the Service Supplied section are reported such operating statistics as Total Annual Vehicle Miles, Total Annual Vehicle Revenue Miles, Total Annual Vehicle Revenue Hours, etc., by system fleet size. In the Service Consumed section are reported such statistics as Total Annual Unlinked Passenger Trips, Total Unlinked Passenger Miles, etc.

The data entries are **totals** of these various **operating statistics** taken over all systems in each fleet size category. The only exception to this procedure is in the entries for Average Time Per Unlinked Weekday Trip — Service Consumed. These entries are **averages** for all the systems in each fleet size category, not totals.

To obtain the **annual totals** presented in the tables, the average weekday data was multiplied by 253, the average Saturday and Sunday data were multiplied by 53 and 59, respectively. The number 253 was calculated by subtracting from the normal total of 260 annual weekdays 7 Sunday-like holidays. These 7 holidays were added to the number of Sundays for a total of 59 Sunday-like days.

The information in these tables was compiled from Form 406 for non-rail modes and from Form 407 for rail modes.

SUMMARY FLEET AGE DISTRIBUTION

The final table in the Non-Financial Operating Data section is entitled Summary Age Distribution of Revenue Vehicle Inventory: Details by Mode. The table presents, by mode, both **the total number** of revenue vehicles nationwide and **the age distribution** of the fleet as **percentages** among six age categories (e.g., 5 years or less, 6-10 years, etc.) and the average age of the fleet.

The information in this table was compiled from Form 408.

TABLE—001.11.1 AS OF 27-Oct-82

END OF REPORT

1.5 PERFORMANCE INDICATORS

Section 1.5 contains the following table for each mode:

1. Transit Performance Indicators: Details by Transit System Size.

The first of these tables, Transit Performance Indicators: Details by Transit System Size, Motor Bus, lists various operational and financial elements (e.g., Total Revenue Vehicles, Total Annual Vehicle Miles, Total Operating Expenses, etc.). Under each of these elements are various key performance indicators developed from them (e.g., Total Revenue Vehicles per Thousand Line Miles, Total Annual Vehicle Miles per Operator, Total Operating Expenses per Vehicle Mile, etc.).

The numbers for these performance indicators are totals and are presented in the data columns by system fleet size. The All Systems column, of course, lists average industry-wide performance indicator numbers independent of fleet size. The remaining tables are identical in format to the Motor Bus table.

The performance indicators presented in these tables were calculated using data compiled from several Forms: the expense Forms 301, 310 (Required); 305, 313, 315 (Level C); 303, 312, 315 (Level B); and 302, 311, 315 (Level A); and the non-financial operating data Forms 402 and 404-407.

SECTION 2

INDIVIDUAL TRANSIT

PROPERTY STATISTICS

2.1 INTRODUCTION

Section 2 of National Urban Mass Transportation Statistics contains numerous statistical tables on the financial and operating data of individual transit systems. All of these statistical tables, similar to those in Section 1 of this report, are grouped into the four major headings:

- 2.2 Transit Expenses
- 2.3 Transit Revenues
- 2.4 Non-Financial Operating Data
- 2.5 Performance Indicators

The lengthy listings of more than 300 individual transit systems are arranged by total fleet size and divided into 7 fleet size categories. "Fleet Size" for each system is determined by the number of its transit vehicles. The largest numerical categories are listed first, like Section 15's Form 001 inventory reports, in the following manner:

- 1. Systems with 1,000 and over revenue vehicles.
- 2. Systems with 500-999 revenue vehicles.
- 3. Systems with 200-499 revenue vehicles.

- 4. Systems with 100-249 revenue vehicles.
- 5. Systems with 50-99 revenue vehicles.
- 6. Systems with 25-49 revenue vehicles.
- 7. Systems with under 25 revenue vehicles.

This numerical organization will enable a transit system to compare its financial and operational performance with that of other systems of comparable size.

The first column of every statistical table lists the two digit State designation for location of the system; the second column lists the name of the transit system.

In some statistical tables, a particular transit system may not be listed because data was not reported, or because data accuracy was not verified.

Other parts of this Introduction provide background and explanatory information to assist the reader in understanding and using the statistical tables in Section 2.

2.2 TRANSIT REVENUES

Section 2.2 contains seven statistical tables, each containing data listed by the name of the transit system, and sorted by transit fleet size. These tables are:

1. Sources of Transit Revenue.
2. Sources of Public Operating Assistance for Transit.
3. State Taxes Dedicated at Their Source for Transit Operations.
4. Local Taxes Dedicated at Their Source for Transit Operations.
5. Sources of Public Capital Assistance for Transit.
6. State Taxes Dedicated at Their Source for Transit Capital.
7. Local Taxes Dedicated at Their Source for Transit Capital.

Under Section 15, revenues are reported only by system totals, not by specific transit mode.

SOURCES OF TRANSIT REVENUE

The first revenue table reports total revenue as well as the various sources of transit revenue by revenue object class. The first data column lists the **Total Number of Revenue Vehicles** by system. The second column lists **Total Revenue in thousands of dollars**. All of the remaining columns cite the percent of the Total Revenue for each different revenue object class, i.e., Transportation Revenue, Non-Transportation Revenue, Special Fare Assistance.

The column headed **Transportation Revenue: Other** represents a combination of revenue object classes including 402 (Special Transit Fares), 403 (School Bus Service Revenues), 404 (Freight Tariffs), 405 (Charter Service Revenues), and 406 (Auxiliary Transportation Revenues).

This is to be distinguished from the next-to-last column labeled **Other** which relates to revenue object class 420 (Subsidy from Other Sectors of Operations).

Data for this table was compiled from Forms 201 and 202.

SOURCES OF PUBLIC OPERATING ASSISTANCE

The revenue table, **Sources of Public Operating Assistance for Transit**, reports the sources of Federal, State and local operating assistance, by transit system size. For the data column, **Total Public Assistance**, the amounts of assistance are listed by thousands of dollars.

For all other data columns, total public assistance from Federal, State, and local sources for transit operations are listed by percentage of the total.

Federal sources of assistance are classified either as funds provided under Section 5 of the 1964 UMTA Act, or from other sources. **State and local** sources are headed by data columns labeled **General Revenue** or **Dedicated** (to transit at their source). Dedicated sources of funds are broken down by Taxes (income, sales), Tolls (bridges, tunnels) or Other.

Data for this table was compiled from Form 203.

DEDICATED STATE AND LOCAL TAXES FOR TRANSIT OPERATIONS

The two revenue tables, **State Taxes Dedicated at Their Source for Transit Operations** and **Local Taxes Dedicated at Their Source for Transit Operations**, report statistics which break down **State and local taxes** dedicated to transit operations by type of tax.

The tables distribute dedicated State and local taxes as percentages of the total among eight tax categories: Income, Sales, Property, Payroll, Utility, Commuter, Gasoline, and Other.

Data in these tables also was compiled from Form 203.

SOURCES OF PUBLIC CAPITAL ASSISTANCE

The fifth revenue table, **Sources of Public Assistance for Transit**, reports on sources of Federal, State, and local capital assistance for transit.

The data column, **Total Public Assistance for transit capital**, lists these amounts in millions of dollars.

The next 13 data columns distribute Total Public Assistance as **percentages** of capital funds from the various public sources. Five categories of sources of **Federal capital assistance** to transit are shown: Section 3 of the 1964 UMTA Act, Section 5 of the 1964 UMTA Act; Other UMTA; Other DOT; and Other Federal.

State and local sources of capital assistance are titled as either General Revenue or Dedicated. Dedicated sources are labeled as either Taxes, Tolls, or Other.

Data for this table was compiled from Form 103.

DEDICATED STATE AND LOCAL TAXES FOR TRANSIT CAPITAL

These two revenue tables, State Taxes Dedicated at Their Source for Transit Capital and Local Taxes Dedicated at Their Source for Transit Capital report statistics on **State and local taxes** dedicated to transit capital **by type of tax**. The tables distribute dedicated State and local taxes as **percentages** among eight tax categories: Income, Sales, Property, Payroll, Utility, Commuter, Gasoline, and Other.

Data for these tables was compiled from Form 103.

END OF REPORT

2.3 TRANSIT EXPENSES

Section 2.3 contains four statistical tables, each with data listed by transit system name, and sorted by fleet size. They are titled:

1. Transit Operating Expenses by Mode and Function.
2. Transit Operating Expenses by Mode and Object Class.
3. Single Mode Motor Bus Transit System, Operating Expenses by Function and Object Class.
4. Employer and Employee Paid Fringe Benefits.

Transit expenses are reported under Section 15 by mode, for multi-modal systems, and by system total expenses.

EXPENSES BY FUNCTION

The expense table, Transit Operating Expenses by Mode and Function, reports transit expenses, by mode, for four major functions — Vehicle Operations, Vehicle Maintenance, Non-Vehicle Maintenance, and General Administration.

Each transit system, once again, is listed by fleet size and grouped into one of the seven system size categories (1,000+, 500-999, etc.).

The third column, labeled Mode, lists the modes operated by each transit system. The letter designations are: MB — Motor Bus; RR — Rail Rapid; SC — Streetcar; TB — Trolleybus; DR — Demand Response; FB — Ferryboat; and OR — Other.

The next column, labeled Fleet Size, lists the number of revenue vehicles in each mode. In the fifth column appears Total Operating Expenses in dollars for each mode operated by that system, and for total operating expenses.

The next four columns distribute Total Operating Expenses for each system, by mode, as percentages among the four major functions (Vehicle Operations, Vehicle Maintenance, etc.).

This data was compiled from Forms 301-304 and 311-314.

EXPENSE BY OBJECT CLASS

The next expense table, Transit Operating Expenses by Mode and Object Class reports statistics on transit operating expenditures by expense object class.

For each transit system, the table distributes Transit Operating Expenses, by mode, as percentages among these nine expense categories:

1. Labor: Operator's Salaries and Wages.
2. Labor: Other Salaries and Wages.
3. Fringe Benefits.
4. Services.
5. Materials and Supplies: Fuels and Lubricants.
6. Materials and Supplies: Tires and Tubes.
7. Materials and Supplies: Other.
8. Casualty and Liability Costs.
9. Other.

The expense category "Other" represents expense object classes 505 (Utilities), 507 (Taxes), 508 (Purchased Transportation), 509 (Miscellaneous), and 510 (Expense Transfers).

It should be noted that for multimodal systems, there is a data row labeled "JE" which stands for Joint Expenses. Under Section 15, Joint Expenses are allocated not by expense object class, but by function for each transit mode.

Data for this table was compiled from Forms 301, 310-313, and 315.

EXPENSES BY FUNCTION AND OBJECT CLASS

The expense table, Single Mode Motor Bus Transit Systems, Operating Expenses by Function and Object Class, deals exclusively with single mode motor bus systems which constitute about 70% of the nation's transit operators.

This table reports operating expenses by function and expense object class.

The data column labeled **Function** lists function codes for the four functional areas mentioned previously. They are: Vehicles Operations — code 010; Vehicle Maintenance — code 041; Non-Vehicle Maintenance — code 042, and General Administration — code 160.

The next data column, **Total Operating Expenses by Function**, lists total operating expenditures, in dollars, for each of the four functions, and also total expenses for all functions.

The next nine data columns distribute operating expenses by function as **percentages** among the nine expense object classes which are named at the top of each column; e.g., Labor: Operator's Salaries and Wages, Fringe Benefits, etc.

Data for this table was compiled from Forms 301 and 305-307.

FRINGE BENEFITS

This last expense table, Employer and Employee Paid Fringe Benefits, provides data on the various

categories of **fringe benefits** paid by transit employers and employees. For each transit system, there are two rows of data labeled Employer Paid and Employee Paid.

The total amount of **fringe benefits, in dollars**, paid by employers and employees is listed in the data column, "Total Employer-Employee Paid Fringe Benefits."

These total amounts are distributed in the next 14 data columns as **percentages** among the various categories (object classes) of fringe benefits. The name of each type of fringe benefit heads each column.

Under Section 15, fringe benefit payments are reported as system totals only, and not by transit mode.

Data in this table was compiled from Form 331.

END OF REPORT

2.4 NON-FINANCIAL OPERATING DATA

Section 2.4 contains seven statistical tables, with listings by **transit system** and **fleet size**. These tables are:

1. Revenue Vehicle Maintenance Performance.
2. Energy Consumption.
3. Transit Way Mileage.
4. Transit-System Employee Count.
5. Transit Accidents.
6. Transit Operating Statistics. Service Supplied and Service Consumed.
7. Age Distribution of Revenue Vehicle Inventory.

TRANSIT MAINTENANCE

The table, Revenue Vehicle Maintenance Performance, reports on transit **maintenance performed by mode**. The **modes** operated by each system, and the **number of revenue vehicles** in each mode are listed in the first and second data column.

The next three data columns report the **number** of roadcalls due to mechanical failure, the **number** of roadcalls for reasons other than mechanical failure, and the **total number** of roadcalls for all reasons by mode and for the whole system.

The column labeled Total Labor Hours for Inspection and Maintenance lists by mode and for the whole system, the **labor hours** of transit system maintenance personnel working on revenue vehicles.

The last of four data columns by mode and for the whole system the **number of light maintenance facilities** serving the number of revenue vehicles (i.e., Under 200, 200-300, Over 300, and Total).

If, in a multimodal system, a light maintenance facility serves more than one mode, then that facility's services is split by tenths (.1, .2, .3) and apportioned to each of the modes.

The data in this table was compiled from Form 402.

ENERGY CONSUMPTION

The table, Energy Consumption, reports statistics on energy consumption by transit **mode**. Consumption of **liquid fuels** (i.e., diesel fuel, gasoline, LPG, LNG, and bunker fuel) is reported in **thousands of gallons** while the consumption of **electric power** is reported in **thousands of kilowatt-hours**.

This statistical table groups transit systems by fleet size and number of revenue vehicles.

Data for this table was compiled from Form 401.

TRANSIT WAY MILEAGE

The table, Transit Way Mileage, reports aggregate transit way **mileage** by transit system for Motor Bus, Trolleybus, Rail Rapid, Streetcar, and Ferryboat.

In addition to transit way mileage, the table reports the **number of crossings** for the Rail Rapid and Streetcar modes and the **number of stations** for the Rail Rapid mode.

Data in this table was compiled from Form 403.

TRANSIT EMPLOYEE COUNT

The table, Transit System Employee Count, reports transit system **employee counts by mode** under three headings — Transportation Maintenance, and General Administration — and in 10 distinct job classifications.

Each of these job classifications is further divided into two groups: **Operating** and **Capital**.

To the extent that an employee works on capital projects, his labor is considered a capital expense; otherwise, labor is considered strictly an operating expense.

In each job category, the number of employees is counted to the nearest one-tenth employee (one employee equivalent = 2000 labor-hours of work).

Data for this table was compiled from Form 404.

SAFETY

The table, Transit Accidents, reports on the numbers of transit accidents, fatalities, and injuries by transit system and by mode. Accidents, fatalities, and injuries are classified as being either Collision, Non-Collision, or Station.

Data for this table was compiled from Form 405.

TRANSIT OPERATING STATISTICS

The table, Transit Operating Statistics: Service Supplied and Service Consumed: Details by Transit System, reports statistics on service supplied and service consumed data by system and by mode.

The table is divided into two parts. The first section reports the first nine categories of service supplied while the second section reports the final four categories of service supplied and the three categories of service consumed.

The categories of service supplied are, for example, Annual Vehicle or Passenger Car Miles, Annual Train Miles, Annual Revenue Capacity Miles, etc.

Note that for the rail modes (i.e., Rail Rapid and Streetcar) both train and passenger car statistics are reported. The ratio of a given passenger car statistic to the corresponding train statistic provides a measure of the average number of passenger cars per train.

To obtain the annual totals presented in the table, the average weekday data were multiplied by 253, the average Saturday and Sunday data were multiplied by 53 and 59, respectively. The number 253 was obtained by subtracting from the normal total of 260 annual weekdays 7 Sunday-like holidays. These 7 holidays were added to the number of Sundays to give a total of 59 Sunday-like days.

Data in this table was compiled from Form 406 for non-rail modes and Form 407 for rail modes. Forms 406 and 407 report average daily (weekday and weekend) statistics on service supplied and service consumed data.

FLEET AGE DISTRIBUTION

The final statistical table under Non-Financial Operating Data is entitled Age Distribution of Revenue Vehicle Inventory. The table reports by transit system and by mode the age distribution of the fleet by percentage among six age categories (e.g., 5 years or less, 6-10 years, etc.).

The last data column, Average Age of Fleet in Years, lists by mode the average ages of the revenue vehicles by mode and for the entire transit system.

Data in this table was compiled from Form 408.

END OF REPORT

2.5 PERFORMANCE INDICATORS

Section 2.5 contains one statistical table, Transit Performance Indicators, listed by transit system. This table reports key financial and operational performance indicators by transit system and by mode.

The table consists of six parts. The first section reports key performance indicators based upon Total Revenue Vehicles Operated, Total Annual Vehicle Miles, and Total Annual Vehicle Hours.

The second part reports performance indicators based on total Annual Vehicle Revenue Miles and Total Annual Vehicle Revenue Hours.

The third part reports fuel consumption in gallons and fuel consumption by kilowatt-hour per vehicle mile, per ten passenger miles, and per ten capacity miles.

The fourth part reports key performance indicators based upon Total Operating Expenses in nine

categories, such as Per Vehicle Mile, Per Capacity Mile, Per Vehicle Hour, etc.

The fifth part reports performance indicators based upon Total Annual Passenger Miles, Total Passengers, and Total Employees.

The sixth and final part of this table provides miscellaneous performance indicators based upon Total Administrative Employees, Total Annual Vehicle Miles, Total Revenue Vehicles, Total Number of Collision Accidents, and Total Number of Non-Collision Accidents.

The performance indicators in these tables were calculated using data compiled from expense Forms 301-303, 305, 310-313, and 315, and from non-financial operating data Forms 402 and 404-407.

END OF REPORT

APPENDIX A

LIST OF TRANSIT PROPERTIES SORTED ALPHABETICALLY BY STATE

INTRODUCTION

The following table lists all of the transit properties which submitted financial and data to UMTA for fiscal years ending between July 1, 1980 and June 30, 1981, pursuant to Section 15 of the UMT Act of 1964, as amended. The properties are listed alphabetically by state and, within a state, alphabetically by city. Within a city, properties are ranked in ascending order by total fleet size (i.e., smallest to largest). In addition to transit ID code, property name and address, and name and phone number of Section 15 contact person, the table lists for each transit property 1980 urbanized area code and population, UMTA region, fiscal year end date, Section 15 reporting level (R, A, B, or C), and the number of revenue vehicles by mode. With the exception of urbanized area code and population, all of this information was compiled from Form 001.

Each property was assigned to one urbanized area, using 1980 Census data, the UMTA **Directory of Public Transportation Service**, and contacts with UMTA Regional Representatives. Although this assignment of urbanized area was straightforward in most instances, care should be taken for some special cases, e.g., where a property serves two urbanized areas, the assignment was made to the area where most of the service was provided.

TABLE—001.01.1 AS OF 28-Oct-82

END OF REPORT

APPENDIX B

GLOSSARY

INTRODUCTION

This glossary contains definitions of various terms used in this report. The definitions may be found in **Urban Mass Transportation Industry Uniform System of Accounts and Records and Reporting System, Volume II**, Report No. UMTA-IT-06-0094-77-1, January 10, 1977.

GLOSSARY

Charter Miles — The total vehicle miles traveled by a revenue vehicle while in charter service. It includes miles traveled while carrying passengers, plus deadhead miles.

Controlled Access Right-of-Way (ROW) — The roadway used for a portion of the day exclusively for transit operations.

Dial-A-Ride or Demand Responsive (DR) — Rubber-tired passenger vehicles operated on city streets, propelled by gas, gasoline or diesel engines, equipped to provide personal demand transit service, normally upon dispatch, and used exclusively for this service.

Directional Roadway Miles — The total miles over which public transportation vehicles travel while in revenue service. If vehicles travel in both directions on a two-way roadway, both sides of the roadway are included.

Exclusive Right-of-Way — Roadway used at all times exclusively for transit operations. It may be grade-separated or controlled access roadway.

Expense Transfer — Accounts used for reporting adjustments and reclassifications of expenses previously recorded.

Ferryboats (FB) — Vessels for carrying passengers and/or vehicles over a body of water. The vessels are generally steam or diesel powered conventional ferry vessels. They also may be hovercraft, hydrofoils, and other high-speed vessels.

FICA or Railroad Retirement — Payments or accruals to the Federal social security or railroad retirement fund required to be made by employees and by employers on behalf of their employees.

Fringe Benefits — Payments or accruals to others (insurance companies, governments, etc.) on behalf of an employee and payments or accruals direct to an employee arising from something other than his performance of a piece of work.

Functional Class — As used in UMTA Section 15, one of two dimensions in which expenses are classified: the type of activity or area of the system (cost center) which incurs an expense (e.g., vehicle operations, vehicle maintenance). The other dimension is Object Class.

General Administration — All costs not associated with vehicle operations, vehicle maintenance, and non-vehicle maintenance such as administrative wages and fringe benefits, advertising, outside professional fees, office supplies, telephone and utilities, general insurance premiums, purchased transportation services, dues, subscriptions, and travel.

Light Maintenance Facilities — Facilities used for inspecting and servicing revenue vehicles and for performing light maintenance work on those vehicles. Light maintenance includes brake adjustments, engine degreasing, tire work, minor body repairs, and painting, etc.

Mixed Traffic Right-of-Way — The roadway other than exclusive and controlled access right-of-way used for transit operations.

Motor Buses (MB) — Rubber-tired passenger vehicles operated on city streets, propelled by gas, gasoline or diesel engines. Class A motor buses are equipped with more than 35 seats, Class B with 25 to 35 seats, and Class C with less than 25 seats.

Non-Vehicle Maintenance — Costs associated with the inspection, maintenance, and repair of assets other than vehicles (buildings, radio equipment, shop equipment, etc.), such as maintenance wages and fringe benefits, maintenance supplies, repair materials, "outside" maintenance and repair work.

Object Class — As used in UMTA Section 15, one of two dimensions in which expenses are classified; refers to the type of expense (wages, fringe benefits, insurance, fuel, etc.). The other dimension is Functional Categories.

Other Revenue Vehicles (OR) — Other modes of transit service such as cable cars, personal rapid transit systems of varying designs, mono-rails, inclined railways, etc., not covered otherwise.

Passenger Mile — A unit of service: one passenger traveling in a vehicle for one mile. (Ten passengers riding in a vehicle for one mile consume 10 passenger miles of transportation services.)

Performance Indicators — Representations of how well an activity, task, or function is being performed.

Rail Rapid Transit Cars (RR) — Rail cars with motive capability, driven by electric power taken from overhead lines or third rails, configured for passenger traffic and usually operated on exclusive right-of-way.

Revenue Capacity Miles (Computed) — Revenue vehicle-miles times the average passenger capacity of the active vehicles in the fleet. Average passenger capacity is determined by averaging the sum of the seated capacity and standing capacity of all active vehicles in the fleet.

Revenue Vehicles — The floating and rolling stock used in providing transit service for passengers. The term "revenue vehicles" includes the body and chassis and all fixtures and appliances inside or attached to the body or chassis, except fare collection equipment and revenue vehicle movement control equipment (radios).

Roadcalls (for Mechanical Failure) — A count of the revenue service interruptions during the reporting period caused by failure of some mechanical element of the revenue vehicle. (Mechanical failures include breakdowns of air equipment, electrical units, fuel system, engine, steering and front axle, rear axle and suspension, and torque converters. Tire failures and fare box failures are not included.)

School Bus — Type I and Type II school vehicles as defined in Highway Safety Program Standard No. 17, used exclusively to transport students, personnel and equipment.

Stations — The total number of rail rapid transit passenger stations.

Streetcars (SC) — Lightweight passenger rail cars operating singly (or in short trains) on fixed rails in right-of-way that is not always separated from other traffic for much of the way. Streetcars do not necessarily have the right-of-way at at-grade crossings with other traffic.

Trolleybuses (TB) — Rubber-tired, electrically powered passenger vehicles operated on city streets drawing power from overhead lines with trolleys.

Unlinked Passenger Trips — The number of passengers who board public transportation vehicles. Passengers are counted each time they board a vehicle, even though more than one vehicle may be used for a single journey from origin to destination.

Vehicle Hours — The total hours of travel by revenue vehicles including hours consumed in passenger service and deadhead travel.

Vehicle Miles — The total distance traveled by revenue vehicles, including both revenue miles and deadhead miles.

Vehicle Revenue Hours — Total number of hours that a vehicle is in revenue service. Excludes hours consumed while traveling to and from storage facilities and during other deadhead travel.

Vehicle Revenue Miles — Total miles traveled by revenue vehicles while in revenue service. Excludes miles traveled to and from storage facilities and other deadhead travel.

Vehicle Maintenance — Costs associated with the inspection, maintenance and repair of vehicles, such as mechanics' wages and fringe benefits, maintenance supplies, repair parts, "outside" maintenance, and repair work.

Vehicle Operations — The costs associated with operating vehicles, such as operators' wages and fringe benefits, fuel, tires, and vehicle licensing.
