National Urban Mass Transportation Statistics

1982 Section 15 Annual Report

Prepared by:
Transportation Systems Center

Transit Financial and Operating Data
Reported for Fiscal Years Ending
Between July 1, 1981 and
June 30, 1982

UMTA Technical Assistance Program

1. Report No. UMTA-MA-06-0107-84-1	2. Government Accession No. PB87 112116/AS	3. Recipient's Catalog No.	
4. Title and Subtitle NATIONAL URBAN MASS TRANSPORTATION STATISTICS, FY 1982 Section 15 Annual Report.		5. Report Date November 1983	6. Performing Organization Code DTS-67
		8. Performing Organization Report No. DOT-TSC-UMTA-83-46	
7. Author(s) Michael Jacobs, Robert O'Connor, Suzanne Chen*, et al.		10. Work Unit No. (TRAIS) MA-06-0107 (UM452/R4647)	11. Contract or Grant No. MA-06-0107
9. Performing Organization Name and Address U.S. Department of Transportation Research and Special Programs Administration Transportation Systems Center Cambridge, MA 02142		13. Type of Report and Period Covered Annual Report July 1, 1981 to June 30, 1982	
12. Sponsoring Agency Name and Address U.S. Department of Transportation Urban Mass Transportation Administration 400 Seventh Street, S.W. Washington, DC 20590		14. Sponsoring Agency Code URT-7	
15. Supplementary Notes *System Development Corporation Cambridge, MA 02142			
16. Abstract This report summarizes the financial and operating data submitted annually to the Urban Mass Transportation Administration (UMTA) by the nation's public transit operators, pursuant to Section 15 of the Urban Mass Transportation (UMT) Act of 1964, as amended. The report also contains supplemental Section 15 data submitted by certain eligible transit systems for use in computing Section 9 apportionments. Section 9 is a new formula grant program for capital, operating, and certain other assistance created by the Surface Transportation Assistance Act of 1982 (which amended the UMT Act). The report consists of four chapters. Chapter 1 contains an introduction to the Section 15 reporting system and the relationship to the Section 9 program. Chapter 2 contains aggregate industry statistics derived from the complete Section 15 reports which were submitted (i.e., excluding the supplemental reports). Chapter 3 contains detailed financial and operating data on the individual transit systems which submitted complete Section 15 reports. Chapter 4 contains the operating statistics (derived from both complete and supplemental reports) which were used in the computation of the FY 1984 Section 9 apportionments. All data in this report are for transit fiscal years ending between July 1, 1981 and June 30, 1982. Other Section 15 Annual Reports include: FY Ending Between July 1, 1978 and June 30, 1979, UMTA-MA-06-0107-81-1; FY Ending Between July 1, 1979 and June 30, 1980, UMTA-MA-06-0107-82-1; FY Ending Between July 1, 1980 and June 30, 1981, UMTA-MA-06-0107-83-1; FY Ending Between July 1, 1980 and June 30, 1981, Supplement, UMTA-MA-06-0107-83-2; and Year Ending Between January 1, 1983 and December 31, 1983, UMTA-MA-06-0107-85-1.

2.09 Transit system employee count by mode and system size: motor bus	2-15

INTRODUCTION

CHAPTER 1

INTRODUCTION — UNDERSTANDING AND USING THIS REPORT

This is the fourth (FY 1982) Annual Report from the Section 15 Reporting System administered by the Urban Mass Transportation Administration (UMTA). The report provides detailed summaries of the financial and operating data submitted to UMTA by the nation's public transit systems. It was produced by UMTA's Office of Technical Assistance and the Transportation Systems Center.

Efforts have been made to present these data in a logical, consistent, readily understandable manner. Each chapter contains an introduction designed to aid in interpreting and using the data presented.

1.1 HOW IS THE REPORT ORGANIZED?

The report is organized into four chapters plus three appendices.

CHAPTER 1 — INTRODUCTION — provides information related to understanding and using this report.

CHAPTER 2 — AGGREGATE TRANSIT STATISTICS — contains financial and operating data summarized for groups of transit systems categorized by mode and size.

CHAPTER 3 — INDIVIDUAL TRANSIT SYSTEM STATISTICS — contains similar mode-specific financial and operating data for individual transit systems. Extensive data are provided for 336 of the nation's mass transit systems.

CHAPTER 4 — OPERATING STATISTICS USED FOR FY 1983 SECTION 9 APPORTIONMENTS — contains data derived from: (1) the full Section 15 reports submitted by 205 transit systems which served urbanized areas with populations of 200,000 or more; and (2) limited supplemental reports submitted by 45 of these systems plus 66 additional transit systems.

APPENDIX A — LIST OF TRANSIT PROPERTIES SORTED ALPHABETICALLY BY STATE

APPENDIX B — GLOSSARY

APPENDIX C — URBANIZED AREA CODES AND POPULATIONS

1.2 HOW ARE THE STATISTICAL TABLES ORGANIZED?

The statistical tables in Chapters 2 and 3 of the report are organized within four major groups:

- transit revenues;
- transit expenses;
- non-financial operating data; and
- performance indicators.

The first three groups of tables contain summaries of the data required by the Section 15 reporting system. The more detailed financial information reported by those transit systems who file at one of the three voluntary reporting levels is aggregated to equivalent required-level data prior to generating these tables.

The fourth group—performance indicators—contains selected statistics derived from the data in the first three groups. Typically, these indicators are computed as ratios, usually relating measures of output to measures of input (e.g., total annual vehicle revenue miles per operator).

Within each table, the data are organized by transit system size, as measured by number of revenue vehicles. Seven groupings are used:

- 1,000 and over revenue vehicles;
- 500 – 999 revenue vehicles;
- 250 – 499 revenue vehicles;

- 100 – 249 revenue vehicles;
- 50 – 99 revenue vehicles;
- 25 – 49 revenue vehicles; and
- less than 25 revenue vehicles.

Depending on the specific table, a multi-modal system may be categorized by the number of revenue vehicles for a single mode, or by the total or combined fleet size for all modes.

1.3 HOW GOOD ARE THE DATA?

The Section 15 data submitted to UMTA by transit systems are subjected to extensive analysis and validation, both manual and automated. The process entails detailed examination of each transit system's report, the identification of errors or questionable entries, and the resolution of these problems in conjunction with the reporting transit system.

UMTA's role in this process, with assistance from the Transportation Systems Center (TSC), is to raise questions and give final approval to a system's data as a prerequisite to entry into the Section 15 data base and Annual Report. UMTA can reject a transit system's report if this report is not in full compliance with reporting requirements, but UMTA cannot change any reported data; all data changes must be made by the reporting transit system.

Despite the extensive efforts entailed, it should be noted that data validation encompasses primarily a review of the consistency and reasonableness of the reported data. Because of the limitations of these procedures as well as the amount of data being validated, it is likely that some erroneous data have found their way into this report. In general, it is felt that most errors of significant magnitude have been detected and corrected, but that some relatively minor errors will remain. These errors generally will derive not from the reporting or data processing procedures per se, but from: (1) difficulties experienced by transit systems in obtaining accurate information in certain instances; and (2) misinterpretation of certain data items.

CAUTION: Because of these limitations and the fact that not all relevant information are reported (weather conditions, topography, work rules, etc.), users of this report should not draw unwarranted conclusions from examination of the data contained herein. Although

comparative evaluations are appealing, analysis of the reported data is not sufficient to account completely for apparent differences in performance. Such evaluations should encompass more detailed examination of underlying factors to determine the extent to which apparent differences are due to unusual events during the period covered, unique aspects of the transit system's operating environment, specific management practices, etc.

1.4 FURTHER INFORMATION ON THE SECTION 15 REPORTING SYSTEM

The following documents provide a more exhaustive description of the Section 15 reporting system.

- *Urban Mass Transportation Industry Uniform System of Accounts and Records and Reporting System*, January 10, 1977.

- *Volume I — General Description*

- *Volume II — Uniform System of Accounts and Records*

These volumes provide an overview of the Section 15 system, discussions of potential applications of Section 15 data, and the definitions used for the uniform system of accounts and records.

- *Required Reporting Manual and Sample Forms*, revised July 1982.
- *Level A Reporting Manual and Sample Forms*, revised July 1982.
- *Level B Reporting Manual and Sample Forms*, revised July 1982.
- *Level C Reporting Manual and Sample Forms*, revised July 1982.

These documents provide instructions and sample forms for use by transit systems in completing their Section 15 reports. Each document is self-contained for the specified reporting level.

- *UMTA Circular 2710.1, Sampling Procedures for Obtaining Fixed Route Bus Operating Data Required Under the Section 15 Reporting System*, February 22, 1978.

- *UMTA Circular 2710.2, Sampling Procedures for Obtaining Demand Responsive Bus Operating Data Required Under the Section 15 Reporting System*, February 22, 1978.

These Circulars suggest optional sampling procedures for collecting passenger trip and passenger mile data required for Section 15 reports. Complete instructions and worksheets are provided for those transit systems wishing to use these procedures.

- *UMTA Circular 2710.5, Section 15 Accounting and Reporting Release #1*, February 11, 1980.
- *UMTA Circular 2710.5A, Section 15 Accounting and Reporting Release #2*, October 1, 1981.

These Circulars raise and discuss certain questions related to Section 15 accounting and reporting requirements not addressed elsewhere.

- *UMTA Circular 9020.1, Guidelines for UMTA Applicants: Fiscal Year 1983*, February 2, 1983.
- *UMTA Circular 9030.1, Section 9 Formula Grant Application Instructions*, June 27, 1983.

These Circulars provide guidance on how to apply for grants under the new Section 9A and Section 9 formula grant programs, respectively. They also discuss the use of Section 15 data in the computation of Section 9A and Section 9 apportionments, and provide guidance on the submittal of supplemental reports permitted for the FY 1981 and FY 1982 Section 15 reporting years.

Volumes I and II of the "...Uniform System of Accounts and Records and Reporting System" are available to the public from the National Technical Information Service (NTIS; No. UMTA-IT-06-0094-77-1). The other documents are available through UMTA's regional offices or through UMTA's Information Services (URT-7, telephone 202/426-9157).

1.5 RELATIONSHIP BETWEEN SECTION 15 AND SECTION 9

Section 9 is a block grant program created by the Sur-

face Transportation Assistance (STA) Act of 1982. The Act authorizes funds for Fiscal Years 1984 through 1986; funds appropriated under this program are apportioned to urbanized areas in accord with a statutory formula, as summarized in Table 1.01. For urbanized areas with populations over 200,000, this formula incorporates the following variables:

- population;
- population density (persons per square mile);
- fixed guideway directional route miles;
- fixed guideway vehicle revenue miles;
- fixed guideway passenger miles;
- fixed guideway operating cost;
- bus vehicle revenue miles;
- bus passenger miles; and
- bus operating cost.

The population and population density statistics are derived from the 1980 U.S. Decennial Census. All other statistics are derived from the most recent available Section 15 data. The Section 15 data in this report—i.e., for the FY 1982 Section 15 reporting year—are being used for apportionment of the Section 9 funds for FY 1984. Since most FY'82 Section 15 data were due prior to the passage of the STA Act of 1982, transit systems who had not reported certain relevant data were permitted to submit supplemental Section 15 reports to UMTA for the FY'82 reporting year. (See UMTA Circular 9020.1.)

The resultant FY'82 Section 15 data used for the FY'84 Section 9 apportionments—including data both from the full data base and from the supplemental reports—are listed in Chapter 4 of this report.

1.6 SPECIAL NOTES

Several general issues pertaining to Section 15 reporting are summarized below. These discussions are designed to aid in interpreting and using the data published in this report.

TABLE 1.01
ALLOCATION FORMULA FOR SECTION 9 FUNDS
(FOR FY'S 1984-1986)

URBANIZED AREA POPULATION	PERCENT OF FUNDS AND WEIGHTING FACTORS
non-urbanized	2.93% (FOR SECTION 18)
<200,000	8.64% 50% — population 50% — population × density [density = inhabitants/square mile]
≥200,000	88.43% 33.29% ("RAIL" TIER*) 95.61% [at least 0.75% of these funds for each UA with commuter rail & pop. ≥750,000] 60% — fixed guideway revenue vehicle-miles 40% — fixed guideway route-miles 4.39% ("INCENTIVE" PORTION OF TIER) [at least 0.75% of these funds for each UA with commuter rail & pop. ≥750,000] — fixed guideway passenger-miles × fixed guideway passenger-miles/operating cost 66.71% (BUS TIER) 90.8% 73.39% for UA's with pop. ≥1,000,000 50% — bus revenue vehicle-miles 25% — population 25% — population × density 26.61% for UA's with pop. <1,000,000 50% — bus revenue vehicle-miles 25% — population 25% — population × density 9.2% ("INCENTIVE" PORTION OF TIER) — bus passenger-miles × bus passenger-miles/operating cost

*Includes all fixed guideway modes, such as rail rapid transit, commuter rail, light rail or streetcar, trolley bus. Also includes ferryboats and exclusive busways and High Occupancy Vehicle lanes.

Purchased Transportation. Many transit systems contract for transportation services. These contracted services usually represent relatively small portions of the total services provided by these systems, although there are exceptions.

- Some purchased transportation services have not been reported under Section 15, a failure which to some extent biases certain aggregate industry statistics derived from the Section 15 data base. Since the FY'81 reporting year, however, it is probable that most of these services have been reported within urbanized areas of over 200,000 population, since failure to so report would have resulted in reduced Section 9A or Section 9 apportionments to these areas.

However, for FY'81 and FY'82, many of these purchased transportation statistics were reported in supplemental reports. Thus, while these data were used for Section 9 apportionment purposes, they have been included neither in the main Section 15 data base nor in the aggregate or system-specific statistical tables in the Annual Reports for these years (including Chapters 2 and 3 of this report).

- Many transit systems have reported simply a "lump sum" expense for "purchased transportation;" i.e., these expenses are reported within a single category rather than allocated among functional classes (vehicle operations, vehicle maintenance, etc.) and object classes (wages and salaries, fringe benefits, materials and supplies, etc.). The lumping of these expenses can bias performance indicators and aggregate statistics related to more disaggregate cost breakdowns.
- Some transit systems reporting (lump sum) purchased transportation expenses did not report the corresponding operating statistics (vehicle miles, vehicle hours, unlinked passenger trips, etc.). This can bias other performance indicators and statistics which are based on these data.

The reporting of comparable purchased transportation expenses and operating statistics is an objective of the data validation process, but this objective realistically is not always attainable. Incomplete reporting often is not revealed even by a detailed review of a transit system's Section 15 report, and the desired data often are not available to the Section 15 reporter.

Because of the difficulties which have been encountered in reporting and interpreting these purchased transportation data, and because of the important role they play in the Section 9 apportionments, the definition and reporting of purchased transportation services currently are being reviewed by UMTA. Circular 9030.1 instructs Section 15 reporters to submit separate non-financial operating statistics (separate completed "400" series Section 15 reporting forms) for transportation services purchased from carriers operating fewer than 50 revenue vehicles. The number of revenue vehicles is being interpreted to mean those used to provide the contract service, and a single (consolidated) sub-set of 400 series forms for all such contract carriers will suffice. If services are purchased from any carrier which uses 50 or more revenue vehicles to provide these services, however, a complete Section 15 report should be submitted for this carrier.

Commuter Rail and Other Non-Explicitly Reported Modes. There are several urban mass transportation modes which are not reported explicitly using current Section 15 reporting forms. Prominent among these is commuter rail; other such modes include cable cars, inclined planes, automated guideway transit (AGT), vanpools, and jitneys.

For Section 15 reporting purposes, these modes can be lumped together into a single "other" category. However, some of these services have not been reported at all by some Section 15 reporters. Conceivably, other such services may have been reported under another category (e.g., jitneys reported as demand response). Because of a variety of reporting inconsistencies, all commuter rail data were deleted from the main Section 15 data base.

FY'82 commuter rail and most "other" mode statistics needed for the FY'84 Section 9 apportionments were obtained through the supplemental reporting process. Thus, there are no commuter rail data and very limited "other" mode data in Chapters 2 and 3 of this report. However, these modes are fully represented in Chapter 4.

Multi-Area Reports. Several Section 15 reporters provide data for transportation services serving more than one urbanized area (UZA). For Section 15 reporting purposes, and as indicated in Appendix A, each reporter has been assigned to a single UZA—generally, that UZA which receives the majority of transportation service.

For Section 9 purposes, relevant data have been disaggregated into the various component urbanized areas. This has been done at the request and direction

of the Section 15 reporter and the component jurisdictions.

1.7 COMPARISON WITH FY 1981 SECTION 15 ANNUAL REPORT

The data tables contained in this report are essentially unchanged from those in the previous Annual Report (for the FY 1981 reporting year). Minor corrections and editorial changes in some of the headings have been made, accompanying text has been rewritten and expanded, but the same types of data are presented, in the same formats.

The following should be noted, however.

- The 1981 report contained a brief introduction followed by Section 1 (aggregate statistics) and Section 2 (individual transit system statistics). The 1982 report contains an expanded introduction labeled as Chapter 1; the aggregate statistics are contained in Chapter 2, and the individual transit system statistics are in Chapter 3.

The tables have been renumbered accordingly. Thus, for example, Table 1.08.1 from the 1981 report corresponds to Table 2.08.1 in the 1982 report; and Table 2.19.3 in the 1981 report corresponds to Table 3.19.3 in the 1982 report.

- Due to space limitations, transit system names as listed in the data tables are abbreviated using no more than 25 characters. Some of these abbreviations have been changed in the interest of greater clarity and consistency among transit systems.

When comparing 1982 tables with those from earlier reports, these changes usually will be readily apparent. Where any doubt exists as to whether specific data for different years are for the same or different transit systems, transit ID numbers should be checked in the respective appendices.

Other changes which have been made in the 1982 report include a new chapter containing the operating statistics used in computing the FY 1984 Section 9 apportionments, and a new appendix listing urbanized area codes, names, and 1980 populations. (Comparable data for the FY 1983 Section 9A apportionments have recently been published as a supplement to the 1981 Section 15 Annual Report.)

1.8 INDUSTRY-GOVERNMENT COOPERATION

The Section 15 reporting system evolved from the transit industry-initiated Project "FARE" (Uniform Financial Accounting and Reporting Elements). Key milestones were as follows.

Spring 1971	ATA (American Transit Association) and IRT (Institute for Rapid Transit) grant request to UMTA to develop a uniform industry reporting system.
March 1972	Beginning of Project FARE.
November 1973	Completion of initial four tasks of Project FARE.
November 1974	Amendments to the UMT Act, establishing the Section 15 requirements: uniform system of accounts and records; and uniform reporting system.
December 1975	Beginning of Project FARE Task V by UMTA and Industry Control Board to meet the Section 15 requirements.
January 1977	Publication of regulations implementing the Section 15 program.
July 1978	Effective date of the Section 15 reporting requirements.
May 1981	Publication of <i>National Urban Mass Transportation Statistics, First Annual Report, Section 15 Reporting System</i> .
June 1982	Publication of <i>National Urban Mass Transportation Statistics, Second Annual Report, Section 15 Reporting System</i> .
November 1982	Publication of <i>National Urban Mass Transportation Statistics, 1981 Section 15 Report</i> .
December 1982	Passage of the Surface Transportation Assistance Act of 1982, establishing the Section 9A and Section 9 formula

grant programs. Computation of the Section 9A and Section 9 urbanized area apportionments utilize, in part, certain transit operating statistics derived from the Section 15 data base.

During these years, a cooperative working arrangement has developed between the transit industry and the Federal government on the Section 15 data collection and reporting system. The private and public sectors have recognized the importance of and need for timely and accurate data on which to assess the continued progress of the nation's mass transportation systems.

To help promote this cooperative effort, UMTA urges all interested parties—transit operators, State and local governments, planning organizations, trade unions, research organizations, etc.—to review and critique this

edition of the *National Urban Mass Transportation Statistics*. Comments and suggestions should be forwarded to Director, Information Services, Office of Technical Assistance, Urban Mass Transportation Administration, URT-7, 400 Seventh Street, S.W., Washington, DC 20590 (telephone 202/426-9157).

1.9 AVAILABILITY OF MACHINE-READABLE SECTION 15 DATA

The data contained in Sections 1 and 2 of the FY'81 Annual Report, and in Chapters 2 and 3 of this current (FY'82) report, are available on floppy diskettes in Data Interchange Format for Apple II, Apple III, and IBM-PC microcomputers. Complete Section 15 data, including required-level data not published in this report, all voluntary-level data, and data for prior reporting years, are available on magnetic tapes. For further information, please call the Transportation Systems Center at (617) 494-2247.

CHAPTER 2

AGGREGATE TRANSIT STATISTICS

CHAPTER 2

AGGREGATE TRANSIT STATISTICS

This chapter contains tables of aggregate industry statistics compiled from the Section 15 data submitted to UMTA by reporting transit systems. These tables do not contain all data reported at the required reporting level, but only selected data items intended to summarize major characteristics of the United States transit industry. Additional aggregate data can be computed from the Section 15 public use tape.

Although some of the tables differ in format, most are similar in appearance. Most of the tables contain eight columns, the first seven of which contain data for different fleet size categories, and an eighth which contains totals for all reporting systems.

Where data are presented by transit mode, the number of revenue vehicles refers to the modal fleet size. Where data include all modes, the number of vehicles refers to the total fleet size.

The row titles in most tables are taken directly from applicable Section 15 forms. For example, row headings in Table 2.02.1 repeat the object classes contained on Forms 201 and 202.

In cases of missing or erroneous data, numbers from a particular transit system were not used in compiling the aggregate statistics. Thus, the "number of transit systems reporting" in some instances is less than the "total number of transit systems".

The tables in this chapter have various applications. For example, subject to the limitations discussed in Chapter 1, transit systems can compare statistics describing various aspects of their performance with comparable aggregate statistics for other transit systems within their "peer group" as determined by modes and fleet sizes.

CAUTION: The statistics in Chapter 2 are not aggregated by other factors which normally would affect the definition of peer groups (climate, types of populations served, etc.). Nor are all relevant information contained in the tables (work rules, strikes and other unusual events affecting service during the reporting year, etc.). Thus, this analysis will serve primarily to "flag" certain aspects of performance which might be analyzed further with regard to the potential for improvement.

Chapter 2 also provides a summary at one point in time

of the state of the national transit industry. Since this is the fourth annual report, the data herein can be used as well to examine industry trends. This analysis can contribute to conclusions on the current and evolving condition and problems of the transit industry, and on the effects of public transit programs on aggregate industry revenues, expenses, operations, and performance.

Chapter 2 contains statistical tables covering four major areas:

- transit revenues;
- transit expenses;
- non-financial operating data; and
- performance indicators.

These are discussed below.

2.1 TRANSIT REVENUES

Tables 2.02.1 through 2.06.2 contain aggregate information on the types and sources of revenue for Section 15 reporting transit systems. Data are provided on the following:

- revenue sources, including passenger fares and various types of local, State, and Federal assistance;
- sources of local, State, and Federal funds for operating and capital assistance; and
- types of State and local taxes used for operating and capital assistance, such as income, sales, and property taxes.

These data are contained in the following tables.

2.02 Sources of Transit Revenue.

2.03 Sources of Public Operating Assistance for Transit.

These two tables contain data taken from Section 15 reporting Forms 201 ("Revenue

Summary Schedule”) and 202 (“Revenue Detail Schedule”). The former form is submitted by transit systems reporting at the required level, and the latter, by those reporting at one of the voluntary levels.

2.04 State and Local Taxes Dedicated at Their Source for Transit Operations.

Derived from Form 203, “Revenue Subsidiary Schedule—Sources of Public Assistance”.

2.05 Sources of Public Capital Assistance for Transit.

2.06 State and Local Taxes Dedicated at Their Source for Transit Capital.

Data in these two tables are derived from Form 103, “Capital Subsidiary Schedule—Sources of Public Capital Assistance”.

Under Section 15 requirements, revenues are reported only by transit system totals, not by individual mode. Since nearly 70% of all transit systems operate only motor bus service, however, separate revenue tables are provided for: (1) single mode motor bus properties (e.g., Table 2.02.1); and (2) all properties (e.g., Table 2.02.2). The latter table combines data for all modes, and is inclusive of the data for single mode motor bus properties.

POTENTIAL DATA APPLICATIONS

These tables present an aggregate description of industry-wide transit revenues, including sources and percentage distributions of revenue within groups as defined by fleet size. These data allow local and State officials to review the extent to which transit systems generally recover operating expenses from fares, and the extent to which they rely on local, State, and Federal assistance.

(Summaries of revenue sources, for single mode motor bus properties and for all properties, respectively, are summarized graphically in Figures 2.01 and 2.02. Further breakdowns of public operating assistance for motor bus and for all properties are summarized in Figures 2.03 and 2.04.)

Analysis also is possible on the extent to which transit operators receive revenue from dedicated and/or

general revenue sources. Dedicated sources restrict funds to transportation-related expenditures, while transit must compete with other public programs for general revenues.

For example, local officials might gain useful insights into other potential revenue sources by examining the types and amounts of local and State dedicated taxes utilized by peers, including sales, property, and gasoline taxes. State and Federal policy-makers can analyze the likely aggregate effects of changes in grant programs on the types and amounts of other revenue sources used by transit operators.

The revenue data in these tables can be examined in light of the comparable data in the previous Annual Reports to indicate how funding sources and levels have changed over time. This might be of interest to State and Federal policy-makers contemplating changes in transit assistance programs, and to transit equipment manufacturers interested in correlating product demand to shifts in funds dedicated to capital.

2.2 TRANSIT EXPENSES

Tables 2.07.1 through 2.10.1 contain aggregate information on the types and amounts of expenses incurred by Section 15 reporting transit systems. In Section 15 reports, transit expenses are stratified in two dimensions: (1) by “functions;” and (2) by “object classes.” Functional classes divide operating expenses into four major categories:

- vehicle operations;
- vehicle maintenance;
- non-vehicle maintenance; and
- general administration.

Further functional breakdowns are provided by transit systems reporting at voluntary level A or B. This detail is not contained in this report, but is available on the Section 15 public use tape.

Object classes divide operating expenses into such categories as labor, fringe benefits, services, materials and supplies, etc. As with the functional categories, more detailed object class breakdowns are provided by the voluntary-level reports, and are available on the Section 15 public use tape.

FISCAL YEAR ENDING BETWEEN 7/01/81 AND 6/30/82

The transit expense tables provide statistical information about transit expenses not only by fleet size, but also by transit mode. This is possible because Section 15 requires expenses to be reported by mode. For each of the various functional categories, transit systems operating multiple modes must allocate “joint expenses” to the appropriate modes.

Aggregate transit expense data are contained in the following tables.

2.07 Transit Operating Expenses by Mode and Function.

Data in this table are derived from a variety of expense report forms: 301 and 310 (R-level); 302 and 311 (A-level); 303 and 312 (B-level); and 304 and 313 (C-level).

Fleet size categories are for all modes operated. For example, a transit system operating 35 motor buses and 20 demand response vehicles would be categorized within the 50-99 fleet size category.

2.08 Transit Operating Expenses by Mode and Object Class.

Eight separate tables are provided, for: motor bus; rail rapid; streetcar; trolleybus; demand response; “other” modes; “joint expenses;” and total of all modes. Data are taken from the same Section 15 reporting forms as are used to generate Table 2.07, plus Form 315 (A-, B-, and C-level).

For the first six tables, fleet size categories are for the mode specified. For the last two tables (joint expenses and total), all modes are combined to determine the fleet size category. The illustrative transit system above, for example, would have data entries in the following categories: Motor Bus (25-49); Demand Response (under 25); Joint Expenses (50-99); Total All Modes (50-99).

2.09 Operating Expenses by Function and Object Class for Single Mode Bus Transit Operators.

Eight separate tables are provided, for each of the seven fleet size categories, plus a total for all single mode bus systems. Data are derived from 301 (R-level), 305 (C-level), 306 (B-level), and 307 (A-level). All of these forms

are entitled “Expenses Classified by Function.”

2.10 Employer and Employee Paid Fringe Benefits.

Data are derived from Form 331, “Fringe Benefits Subsidiary Schedule.” This form is required only from transit systems operating over 25 revenue vehicles.

Data presented represent system totals, since fringe benefit payments are not reported separately by mode.

EXPENSES BY FUNCTION

Analyses of expenses by function must be qualified by at least two basic considerations: the degree to which transit systems uniformly allocate expenses among the various functional categories; and the degree to which these allocations can be accommodated by the Section 15 uniform system of accounts and records.

This first consideration is of general concern. The allocation of most expenses is relatively straightforward, but some allocations are more judgmental, such that similar expenses of certain types may be allocated differently by different transit systems. While this is not felt to be a major problem, care should be taken in the analysis of specific data items which may lend themselves to differing interpretations regarding allocation to functional categories.

The second consideration generally is of concern only in a few specific areas. For example, the various expense reporting forms provide Section 15 reporters with the means to allocate “utilities” expenses only among the “vehicle maintenance,” “non-vehicle maintenance,” and “general administration” categories. Utilities expenses such as those for electricity used for propulsion of rail rapid transit and light rail cars, therefore, cannot be reported under the “vehicle operations” category, but must be allocated to one or more of these other categories.

EXPENSES BY OBJECT CLASS

A separate “Joint Expenses” table is required because the Section 15 reporting forms allocate joint expenses to individual modes by function, but not by object class.

For example, if Vehicle Maintenance—Utility expenses

(function number 041, object class 505) are shared by motor bus and trolleybus, these are categorized and reported as joint expenses. These expenses are added to other comparable joint expenses—i.e., for these same two modes, for the Vehicle Maintenance function, for different object classes—and the totals are allocated between the two modes.

This procedure makes it possible to compute a total expense by function for each mode. However, a comparable total cannot be computed for specific object classes (e.g., Utilities expenses) since the joint expenses for individual object classes are not apportioned to the specific modes.

Thus, for a given mode, “total” expenses for object classes such as operator’s salaries and wages exclude any reported joint expenses. Joint expenses are summarized in a separate table. Because use of joint expense categories varies among operators, this could affect comparisons which utilize object class totals.

The “Total All Modes” table is identical to the individual mode and joint expenses tables, except for two additional rows which show “reconciling items” (e.g., interest expenses, leases and rentals, depreciation) and “total expenses” including reconciling items. Under the Section 15 Uniform System of Accounts and Records, reconciling items are reported only as system totals, and not separately by mode. Reconciling items are needed to provide an overall total which is consistent with local published reports. They are reported separately under Section 15 because local accounting practices for handling such items (particularly depreciation and amortization) differ widely.

Generally, analysts using Section 15 data exclude reconciling items from operating expenses. Although this actually understates true operating costs, it alleviates the problems inherent in inconsistent treatment of reconciling items. In Chapter 3, Operating Expenses listed in the tables for individual transit systems exclude reconciling items, as do the Operating Expenses listed in Chapter 4 and used by UMTA in computing the Section 9 apportionments.

POTENTIAL DATA APPLICATIONS

The expense tables present an aggregate description of industry-wide costs. Data are disaggregated by functional categories and object classes, and by mode. These data can be used to provide a gross comparison of costs and cost distributions for a specific transit system with comparable information for all other re-

porting transit systems within the appropriate mode and size group. Potentially, subject to more detailed analysis of underlying factors, this can help “target” certain problem areas or other areas having opportunities for cost reductions.

Again, conclusions from such analyses are limited because peer groups are formed only on the basis of fleet size and mode. Also, costs generally should be reviewed in conjunction with other operating and patronage data. This approach provides a more complete picture of transit performance.

(Transit operating expenses by function are summarized schematically in Figures 2.05, 2.06, and 2.07 for motor bus, rail rapid transit, and all modes, respectively.)

2.3 NON-FINANCIAL OPERATING DATA

Tables 2.11.1 through 2.17.1 contain aggregate non-financial operating data. Whereas operating expenses represent resources consumed by the transit industry, the non-financial data contain some information as well on the products or outputs of the industry.

Thus, at a national level, these data can be used to help answer questions on what service was provided in return for the nationwide investment in transit; how many employees, how much fuel, and how many vehicles, for example, were required to provide that service; how safe was the service; and how much use was made of the service by transit patrons.

The aggregate non-financial data are provided in the following tables.

2.11 Transit Accidents and Energy Consumption.

Seven tables are included, one for each of the modes reported under Section 15 (including the “other” mode). The data are aggregated by fleet size, which is determined for each modal table by the number of revenue vehicles for that mode only.

The data are derived from Forms 402 (“Revenue Vehicle Maintenance Performance and Energy Consumption Schedule”) and 405 (“Transit System Accidents Schedule”).

2.12 Revenue Vehicle Maintenance Performance.

FIGURE 2.05

FIGURE 2.07
TRANSIT OPERATING EXPENSES BY MODE AND FUNCTION: DETAILS BY TRANSIT SYSTEM SIZE
ALL MODES

FISCAL YEAR ENDING BETWEEN 7/01/81 AND 6/30/82

As above, seven tables are included—one for each mode—and the data are aggregated by the size of the revenue fleet for each mode. The data are taken from Form 402.

2.13 Transit Way Mileage: National Summary.

Data are derived from Form 403, “Transit Way Mileage Schedule.”

2.14 Transit System Employee Count.

Again, seven tables are included, which report employee data by mode and by size of revenue fleet for each respective mode. The data are taken from Form 404, “Transit System Employee Count Schedule.”

2.15 & 2.16 Aggregate National Transit Operating Statistics: Service Supplied and Service Consumed

Table 2.15.1 includes four separate tables. These contain data by size of modal revenue fleet for each of the four non-rail modes (motor bus, trolleybus, demand response, and ferryboat). The data are taken from Form 406, “Transit System Service Supplied, Service Consumed and Service Personnel Schedule.”

Similarly, Table 2.16.1 includes two separate tables. These contain data by size of modal revenue fleet size for each of the two rail modes (rail rapid and streetcar). The data are taken from Form 407 (same title as Form 406, but modified slightly so as to distinguish between vehicles and trains or “consists”).

2.17 Summary Age Distribution of Revenue Vehicle Inventory.

Data are stratified by mode and age of vehicles in the revenue fleets. The source is Form 408, “Revenue Vehicle Inventory Schedule.”

The age of a vehicle relates to the date of its manufacture. Information is not provided on vehicle rehabilitation.

(Vehicle age distributions also are summarized graphically in Figure 2.08.)

TRANSIT MAINTENANCE

The upper portion of Table 2.12 summarizes numbers of roadcalls; the lower portion, numbers of light maintenance facilities. Use of these data for specific analyses generally require additional data such as vehicle miles and age of fleet.

More importantly, the interpretation of what constitutes a roadcall has not been uniform, such that these data are not entirely consistent from one transit system to another. Thus, roadcall figures should be viewed simply as gross indicators with some utility for time series analyses; specific analyses of roadcalls as measures of maintenance performance require detailed examination of how roadcalls were defined.

TRANSIT WAY MILEAGE

The term “miles of directional roadway” as reported under Section 15, is defined synonymously with the term “directional route miles” used in the Section 9 apportionment formula. The term is defined as the total miles over which public transportation vehicles travel while in revenue service. It is influenced by direction of service, but not by the number of traffic lanes or rail tracks existing in a given right-of-way.

If vehicles travel in only one direction within a right-of-way, each mile is counted once. If vehicles travel in both directions, each mile is counted twice. For example, a mile of single track over which streetcars operate in both directions represents two directional route miles. And a mile of exclusive busway on which a transit company operates six different routes in only a single direction represents one directional route mile, regardless of the number of lanes.

This definition has been subject to misinterpretation, with some transit systems reporting, in essence, non-directional route miles; i.e., usually about half of the correct figure. Because of the use of fixed guideway directional route miles in the Section 9 apportionment formula, it is probable that these errors all have been corrected for these modes. For the non-fixed guideway modes, however, it is possible that a few incorrect statistics remain in the data base.

FIGURE 2.08
SUMMARY AGE DISTRIBUTION OF REVENUE VEHICLES
INVENTORY BY MODE

* - INDICATES PERCENTAGES UNDER 3 PERCENT

FISCAL YEAR ENDING BETWEEN 7/01/81 AND 6/30/82

TRANSIT EMPLOYEE COUNT

To the extent that an employee works on capital projects, his labor is considered a capital expense; otherwise, it is an operating expense.

Within each job category, the number of employees is expressed in terms of the number of employee equivalents for the year, to the nearest one-tenth employee (one employee equivalent = 2000 labor-hours of work). This accounts for the fractions which appear in Table 2.14.

(Employee counts for the motor bus mode are summarized schematically in Figure 2.09; properties include both single mode and multi-mode systems, and are grouped by numbers of buses in the respective revenue fleets).

SERVICE SUPPLIED AND SERVICE CONSUMED DATA

"Service supplied" data include vehicle miles, vehicle revenue miles, vehicle hours, and vehicle revenue hours. The difference between vehicle miles and vehicle revenue miles represents deadheading, and accurate representation of this factor is particularly important since vehicle revenue miles are used in the Section 9 apportionment formula.

Unfortunately, only relatively brief definitions of these terms are provided in Volume II of the *Uniform System of Accounts and Records and Reporting System*. Much more extensive definitions are provided in UMTA Circular 9030.1, but Section 15 data for the FY 1982 reporting year were submitted prior to publication of this Circular.

The interpretation and measurement of deadheading miles were not consistent from one transit system to another. Consistency was sought through the data validation process, during which many changes were made. It is likely that the consistency objective in this area was attained in large part, but not completely.

"Service consumed" data refer to ridership information (measures of use of the service which was supplied), and include unlinked passenger trips, passenger miles, and average time per unlinked passenger trip. (This last data item has been reported by some systems for FY 1983, but is no longer required, and will not be collected in the future.)

Passenger mile data are used in the Section 9 apportionment formula. Because these data are not normally collected by transit systems as a routine part of their operations, they are among the most difficult to collect. In most instances, they are collected using sampling techniques. While UMTA has suggested several such techniques, transit systems may use any sampling techniques which satisfy precision and confidence requirements of 10 percent and 95 percent, respectively.

A general problem exists relating to the estimation of annual totals of both the service supplied and service consumed data. These data are reported on Forms 406 (for non-rail modes) and 407 (for rail modes), and are reported in terms of average weekday, average Saturday, and average Sunday. No provision is made for reporting either annual totals directly, or the numbers of weekday, Saturday, and Sunday schedules operated.

Planned changes to the Section 15 reporting forms and procedures include provision for reporting annual totals directly. For the FY'82 data, annual totals were estimated by assuming the operation of 253 weekday schedules, 53 Saturday schedules, and 59 Sunday schedules (i.e., including holidays). This approach was uniform for all reporting transit systems, but obviously introduces small errors for some systems.

2.4 PERFORMANCE INDICATORS

Tables 2.18.1 and 2.18.2 contain transit performance indicators for each non-rail mode and each rail mode, respectively. Performance indicators are not reported directly, but are derived measures. Usually, they relate measures of service outputs or utilization (e.g., vehicle revenue miles, passenger miles) to measures of resource inputs (e.g., revenue vehicles, labor hours).

For example, the tables provide, for each mode and fleet size category, operating expenses per vehicle (pm peak), operating expenses per vehicle revenue hour, and operating expenses per passenger mile. Subject to the qualifications discussed earlier (relating basically to the need to examine underlying factors in greater depth), such indicators can provide "typical" measures useful for general comparative purposes; i.e., comparison of these statistics against the comparable statistics for a specific transit system can help "flag" potential areas for improvement.

The figures in these tables all are weighted averages. For example, if there are six reporting transit systems

FIGURE 2.09
TRANSIT SYSTEM EMPLOYEE COUNT BY MODE AND SYSTEM SIZE
MOTOR BUS

FISCAL YEAR ENDING BETWEEN 7/01/81 AND 6/30/82

* TOTAL # OF SYSTEM EMPLOYEES
 # OF SYSTEMS REPORTING
 TOTAL # OF SYSTEMS

* LABOR EMPLOYEE EQUIVALENTS

for a specific mode and fleet size category, the indicator "total annual vehicle revenue hours per vehicle (pm peak)" is computed by summing the annual vehicle revenue hours for these six systems, summing their pm peak vehicles, and dividing the former result by the latter.

The performance indicators included in the tables are only a few of those which can be computed. In general, analysts should select very carefully those measures most relevant to their specific needs, including other indicators which can be developed from the Section 15 data base and/or other sources.

END OF REPORT

CHAPTER 3

INDIVIDUAL TRANSIT PROPERTY STATISTICS

CHAPTER 3

INDIVIDUAL TRANSIT SYSTEM STATISTICS

This chapter contains numerous statistical tables summarizing financial and operating characteristics of individual transit systems. These tables are compiled from selected Section 15 data submitted to UMTA by these systems. Additional data on the individual systems, including additional required-level data as well as voluntary-level data, are available from the Section 15 public use tape.

Within each table, transit systems are grouped within seven fleet size categories:

- 1,000 and over revenue vehicles;
- 500-999 revenue vehicles;
- 250-499 revenue vehicles;
- 100-249 revenue vehicles;
- 50-99 revenue vehicles;
- 25-49 revenue vehicles; and
- under 25 revenue vehicles.

"Fleet size" for each system is determined by the total number of transit vehicles used for revenue service, including all modes. For example, a transit system with a multi-modal fleet of 300 motor buses, 150 trolley buses, and 100 demand response vehicles would be listed in all tables in the "500-999" vehicle category. Separate data are provided for each mode, however, including the respective numbers of revenue vehicles.

The first column of each table lists the two-digit State code designating the primary location of the transit system; the transit system name is contained in the second column. Other transit system identification—including the urbanized area (UZA) code and population as enumerated by the 1980 U.S. Decennial Census, the name and telephone number of the primary Section 15 contact person, and the Section 15 identification number—are contained in Appendix A, sorted alphabetically by State.

Several Section 15 reporters provide data for transportation services serving more than one UZA. For Section 15 reporting purposes, and as indicated in Appendix A, each reporter has been assigned to a single UZA,

generally to that UZA receiving the majority of transportation services. (For Section 9 apportionment purposes, as discussed in Chapter 4, relevant data were disaggregated into the various component urbanized areas).

In some tables, a particular transit system may not be listed because certain data items either were not reported or were not verified satisfactorily during the validation process. In cases of a missing entry for a particular data item, the transit system will be included in the appropriate table(s), but with a zero in the appropriate field(s). Missing data generally can be distinguished from true reported zeros by examining the context in which these data are found. If there are any instances where a more definitive distinction is desired, this can be obtained from the public use tape (sequential format), which distinguishes between blanks and zeros.

The data in this chapter have a broad range of applications, subject to the limitations discussed in Chapters 1 and 2 relating to the need to examine underlying factors and consistency of the data in a more detailed manner. Whereas the aggregate statistics in Chapter 2 permit transit systems to compare their performance with industry averages within specified fleet size categories, the statistics in Chapter 3 permit systems to perform these comparisons more selectively; i.e., by selecting for comparison those specific systems felt to be in the same "peer group" by virtue of climate, topography, demographic characteristics of the served population, etc.

CAUTION: There may be a tendency by some analysts to overstate the significance of comparisons based strictly on the data contained in this report. Performance measures obtained using these data should be viewed strictly as tentative indicators of potential areas for improvement. If a specific indicator appears to indicate below-average performance relative to industry peers (comparable transit systems), more detailed analysis is imperative in order to reveal the factors underlying the below-average value. These factors either may be susceptible to improvements, or they may be beyond the control of management.

Chapter 3 presents a detailed description at one point in time of the performance of each of the 336 individual transit systems. Since this is the fourth annual report,

and since most of these systems also reported for the earlier years, the data also can be used for time-series analyses. Such analyses can contribute to conclusions on the current and evolving condition and problems of specific systems as well as the transit industry as a whole.

The tables in Chapter 3 are organized within the same four groupings used in Chapter 2 for industry-wide statistics. The groupings are:

- transit revenues;
- transit expenses;
- non-financial operating data; and
- performance indicators.

These are discussed below.

3.1 TRANSIT REVENUES

Under Section 15 requirements, revenues are reported only by transit system totals, not by individual transit mode. Tables 3.01.1 through 3.07.1 contain information on the types and sources of these revenues for individual transit systems.

3.01 Sources of Transit Revenue.

Data were compiled from Section 15 Reporting Forms 201 and 202, "Revenue Summary Schedule" and "Revenue Detail Schedule," respectively. Transit systems submitting required-level reports completed the former form, while those submitting voluntary-level reports completed the latter.

The column headed "Transportation Revenue: Other" combines various revenue object classes including 402 (Special Transit Fares), 403 (School Bus Service Revenues), 404 (Freight Tariffs), 405 (Charter Service Revenues), and 406 (Auxiliary Transportation Revenues). This should be distinguished from the next-to-last column labeled "Other" which is taken from object class 440 (Subsidy from Other Sectors of Operations).

3.02 Sources of Public Operating Assistance for Transit.

Data were compiled from Form 203, "Revenue Subsidiary Schedule—Sources of Public Assistance."

Federal sources of assistance are classified either as funds provided under Section 5 of the 1964 UMTA Act, as amended, or from other sources. State and local sources are divided into "General Revenue" and "Dedicated." Dedicated sources restrict funds to transportation-related expenditures, while transit must compete with other public programs for general revenues. Dedicated sources of funds are broken down further into "Taxes" (income, sales, etc.), "Tolls" (bridges, tunnels, etc.), or "Other."

3.03 State Taxes Dedicated at Their Source for Transit Operations.

3.04 Local Taxes Dedicated at Their Source for Transit Operations.

Data for these two tables also were compiled from Form 203. The two tables utilize identical formats, Table 3.03 for State taxes, and Table 3.04 for local taxes.

3.05 Sources of Public Capital Assistance for Transit.

Data were compiled from Form 103, "Capital Subsidiary Schedule—Sources of Public Capital Assistance."

3.06 State Taxes Dedicated at Their Source for Transit Capital.

3.07 Local Taxes Dedicated at Their Source for Transit Capital.

Data for these two tables also were compiled from Form 103. The format for these two tables is identical to that used for Tables 3.03 and 3.04.

POTENTIAL DATA APPLICATIONS

These tables summarize magnitudes and sources of transit revenues for individual transit systems. The data contained herein permit analysis of the extent to which specific systems recover operating expenses from fares, and the extent to which they rely on various types of local, State, and/or Federal assistance.

Transit systems can use these data to compare the sources and percentage distributions of their revenue to those of other systems. In general, the data permit cross-sectional and time series analyses similar to those permitted by the comparable aggregate data in Chapter 2, except that the data in Chapter 3 permit analysts to examine individual systems and to custom define "peer groups." For example, peer groups could be formed based on mode, fleet size, annual operating expenses, and/or such other factors not contained in this report as climate and collective bargaining agreements. Comparisons can be made to the individual transit systems in the group, or to overall group averages.

3.2 TRANSIT EXPENSES

Tables 2.8.1 through 2.11.1 contain information on the types and amounts of expenses incurred by individual transit systems reporting under Section 15. As summarized in Chapter 2, transit expenses so reported are stratified in two dimensions: (1) by "functions;" and (2) by "object classes." Functional classes divide operating expenses into four major categories:

- vehicle operations;
- vehicle maintenance;
- non-vehicle maintenance; and
- general administration.

Further functional breakdowns are provided by transit systems reporting at voluntary levels A or B. This detail is not contained in this report, but is available on the Section 15 public use tape.

Object classes divide operating expenses into such categories as labor, fringe benefits, services, materials and supplies, etc. As with the functional categories, more detailed object class breakdowns are provided by the voluntary-level reports, and are available on the Section 15 public use tape.

Whereas revenue data were summarized for all modes operated by a transit system, the expense data are broken down by mode, in accord with Section 15 reporting requirements. For each of the various functional categories, multi-modal transit systems must allocate "joint expenses" to the appropriate modes.

Transit expense data for individual transit systems are

summarized in the following tables.

3.08 Transit Operating Expenses by Mode and Function.

Data were compiled from a variety of expense report forms: 301 and 310 (R-level); 302 and 311 (A-level); 303 and 312 (B-level); 304 and 313 (C-level), and 315 (A-, B-, and C-levels).

Transit systems are listed in order of decreasing total fleet size (revenue vehicles for all modes combined). Data are listed by mode, with joint expenses allocated to the appropriate modes.

3.09 Transit Operating Expenses by Mode and Object Class.

Data were compiled from the same forms used for Table 2.08, and transit systems again are listed in order of decreasing total fleet size. Object class categories correspond to those reported on Form 301:

- 501.01 — operators' salaries and wages;
- 501.02 — other salaries and wages;
- 502 — fringe benefits;
- 503 — services;
- 504.01 — fuel and lubricants;
- 504.02 — tires and tubes;
- 504.99 — other materials and supplies;
- 506 — casualty and liability costs;
- "other" (including 505-utilities, 507-taxes, 508-purchased transportation, 509-miscellaneous expense, and 510-expense transfers).

Although data are listed by mode, Section 15 reporting does not explicitly allocate joint expenses to detailed object classes. Thus, total expenses listed in this table for a particular mode exclude joint expenses; these figures are therefore lower than the comparable figures reported in Table 2.08 for a multi-modal system, with joint expenses ("JE") reported as a separate "mode."

3.10 Single Mode Motor Bus Transit System, Operating Expenses by Function and Object Class.

Inclusion of this table reflects the fact that about 70 percent of Section 15 reporters operate only motor bus services. Data are cross-classified by major functional and object classes, and were derived from Forms 301 and 305-307 ("Expenses Classified by Function" for reporting levels R, C, B, and A, respectively).

Object classes are the same as those in Table 2.09. The function codes used in the table represent the four major functional categories:

- 010 — vehicle operations;
- 041 — vehicle maintenance;
- 042 — non-vehicle maintenance; and
- 160 — general administration.

3.11 Employer and Employee Paid Fringe Benefits.

Data are derived from Form 331, "Fringe Benefits Subsidiary Schedule." The information presented represents system totals, since fringe benefit payments are not reported separately by mode.

EXPENSES BY FUNCTION

As discussed in somewhat more detail in Chapter 2, analyses of expenses by function must be qualified by at least two basic considerations: the degree to which transit systems uniformly allocate expenses among the various functional categories; and the degree to which these allocations can be accommodated by the Section 15 uniform system of accounts and records.

These concerns are particularly relevant to analyses of specific transit systems. These analyses should include careful consideration of Section 15 reporting limitations as well as detailed accounting practices at the specific transit systems being examined.

EXPENSES BY OBJECT CLASS

Under Section 15, expenses for multi-modal transit systems are allocated to the individual modes by major function, but not by object class. Consequently, modal totals for object classes such as operators' salaries and wages or utilities exclude any reported joint expenses. The "Joint Expenses" entries in Table 3.09 provide data

by object class on those operating expenditures of multimodal systems which cannot be assigned directly to a particular mode.

Because use of joint expense categories varies among transit systems, this could affect comparisons using object class totals (e.g., operators' salaries and wages per vehicle revenue mile).

If there is a need to allocate joint expenses among modes using object class categories, analysts may define their own cost allocation algorithms. This should be done carefully, and results of such analyses should be appropriately qualified.

RECONCILING EXPENSES

The operating expenses summarized in these tables exclude "reconciling items" (e.g., interest expenses, leases and rentals, depreciation). Under Section 15, reconciling items are reported only as system totals; they are not broken down by either mode or functional class.

Reconciling items are needed to provide an overall total which is consistent with locally published reports. These expenses are reported separately under Section 15 because local accounting practices for handling such items (particularly depreciation and amortization) differ widely.

Generally, analysts using Section 15 data exclude reconciling items from operating expenses. Although this actually understates true operating costs, it resolves the problems inherent in inconsistent treatment of reconciling items. "Operating expenses" used in the "incentive tier" of the Section 9 allocation formula also exclude reconciling items.

POTENTIAL DATA APPLICATIONS

The expense tables summarize costs of operating individual transit systems. Data are disaggregated by mode and by functional and object classes. These data can be used to compare amounts and distributions of costs among various transit systems, and to "flag" potential areas for improvements. As discussed in Chapters 1 and 2, such analyses should incorporate careful examination of all causal factors underlying these differences. This examination requires information beyond that which is obtainable from Section 15.

3.3 NON-FINANCIAL OPERATING DATA

Tables 3.12.1 through 3.18.1 contain non-financial operating data for individual transit systems. Whereas operating expenses represent resources consumed, the non-financial data contain some information as well on the products or outputs of these transit systems.

Thus, these data can be used for specific transit systems to help answer questions regarding service provided relative to the investment required: how many employees, how much fuel, and how many vehicles, for example, were required to provide that service; how safe was the service; and how much use was made of the service by transit patrons.

The non-financial operating data are provided in the following tables. As with the revenue and expense tables, transit systems are listed in order of decreasing total (all mode) fleet size. For multi-modal systems, data are broken down by mode.

3.12 Revenue Vehicle Maintenance Performance.

Data were compiled from Form 402, "Revenue Vehicle Maintenance Performance and Energy Consumption Schedule."

3.13 Energy Consumption.

Data for this table also were compiled from Form 402.

3.14 Transit Way Mileage.

Data were compiled from Form 403, "Transit Way Mileage Schedule."

3.15 Transit System Employee Count.

Data were compiled from Form 404, "Transit System Employee Count Schedule." Fractional entries result from the fact that numbers of employees are expressed in terms of "employee equivalents" for the year, to the nearest one-tenth employee. One employee equivalent is defined as 2,000 labor hours.

3.16 Transit Accidents.

Data were compiled from Form 405, "Transit System Accidents Schedule."

3.17 Transit Operating Statistics: Service Sup-

plied and Service Consumed.

Service supplied data are summarized in Tables 3.17.1 and 3.17.2. The latter table also contains service consumed data. These data were compiled from Forms 406 and 407, "Transit System Service Supplied, Service Consumed, and Personnel Schedule" for non-rail modes and rail modes, respectively.

3.18 Age Distribution of Revenue Vehicle Inventory.

Data were compiled from Form 408, "Revenue Vehicle Inventory Schedule." The age of a vehicle relates to the date of its manufacture. Information is not provided on rehabilitated vehicles.

TRANSIT MAINTENANCE

Table 3.12 presents selected maintenance statistics. Analyses of these data also should incorporate additional information related to amount of service provided and to conditions under which the service was operated (e.g., vehicle miles, age distribution of fleet, maintenance facilities, climate).

As noted in Chapter 2, transit systems do not appear to have interpreted the term "roadcalls" uniformly. Thus, conclusions related to these statistics should not be made without first ascertaining the precise definitions applied by the transit systems being analyzed.

TRANSIT WAY MILEAGE

Several terms are used by the Section 15 reporting system with regard to measurement of transit ways. Form 403 and Table 3.14.1 refer to "miles of directional roadway" and "directional route miles" (on either exclusive, controlled access, or mixed traffic right-of-way). These two terms are synonymous; the former is used for the rail rapid transit, streetcar, and ferry boat modes, while the latter is used for the motor bus and trolley bus modes. (Note that transit way is not measured for the demand response mode, which is a non-fixed route form of service.)

These terms—miles of directional roadway and directional route miles—also are synonymous with the term "directional route miles" used in the Section 9 appor-

tionment formula. These terms are defined as the total miles over which public transportation vehicles travel while in revenue service. They are influenced by direction of service, but not by the number of traffic lanes or rail tracks existing in a given right-of-way.

If vehicles travel in only one direction within a right-of-way, each mile is counted once. If vehicles travel in both directions, each mile is counted twice. For example, a mile of single track over which streetcars operate in both directions represents two directional route miles. And a mile of exclusive busway on which a transit company operates six different routes in only a single direction represents one directional route mile, regardless of the number of lanes.

As discussed in Chapter 2, this definition has been subject to some misinterpretation, with some transit systems reporting, in essence, non-directional route miles; i.e., usually about half of the correct figure. It is probable that these errors all have been corrected for fixed guideway modes, since these statistics are used in the Section 9 apportionment formula. For the non-fixed guideway modes, however, it is possible that a few incorrect statistics remain in the data base.

SERVICE SUPPLIED AND SERVICE CONSUMED DATA

“Service supplied” data and “service consumed” data are discussed in somewhat greater detail in Chapter 2. Briefly, the former include such measures as vehicle miles and vehicle revenue miles. The distinction between these two particular measures—representing deadheading—is an important one which affects the computation of the Section 9 apportionments.

Extended definitions of these are contained in UMTA Circular 9020.2, but all data contained in this report were submitted prior to publication of this Circular. Partly as a consequence, the interpretation and reporting of these measures among transit systems were not completely consistent. Consistency was a major objective of the data validation process, but it is likely that this objective was not achieved completely, and that small discrepancies remain.

“Service consumed” data refer to ridership data, including unlinked passenger trips, passenger miles, and average time per unlinked passenger trip. Passenger miles are used in the “incentive tier” of the Section 9 apportionment formula, and are collected generally using sampling techniques. UMTA has suggested several acceptable methodologies, but a transit system is free to use any sampling techniques which meets pre-

scribed precision and confidence requirements of 10 percent and 95 percent, respectively.

Both service supplied and service consumed data are derived from Forms 406 and 407, neither of which provides for the direct reporting of annual statistics. Instead, data are reported in terms of average weekday, average Saturday, and average Sunday, and annual estimates are computed by assuming for all systems the operation of schedules for 253 weekdays, 53 Saturdays, and 59 Sundays. (If, for example, no service is operated on Sundays, zeros will be entered in the Sunday column).

This approach introduces slight errors in the annual statistics for some systems. It is intended that reporting procedures will be revised soon to allow for the direct reporting of annual totals.

3.4 PERFORMANCE INDICATORS

Tables 3.19.1 through 3.19.6 contain selected performance indicators for individual transit systems. These indicators are not reported directly, but are computed from other data. Usually, these relate measures of service outputs or utilization to measures of resource inputs (e.g., vehicle revenue miles per revenue vehicle, passenger miles per labor hour).

Transit systems are listed in order of decreasing total fleet size (number of revenue vehicles of all modes combined). Indicators are computed separately for each mode, and therefore do not utilize any measures not reported on a modal basis (e.g., revenues, reconciling expenses). The term “line mile” in some of the indicators refers to directional route miles (miles of directional roadway, or directional miles on each of the various types of rights-of-way).

Many additional performance indicators can be computed from Section 15 data and other sources. Again, analysts should note the limitations relating to interpretation and use of any performance indicators, relating primarily to the need to examine underlying or causal factors in greater detail.

There is particularly great potential for distortion if only one or two indicators are viewed in isolation. For example, the single measure “operating expense per unlinked passenger” might be very misleading for a system with a disproportionately high number of transfers (caused, for example, by geographical and topographical constraints). In general, care should be taken to examine a balanced set of indicators for use in evaluation.

END OF REPORT

CHAPTER 4

OPERATING STATISTICS

USED FOR FY 1983

SECTION 9 APPORTIONMENTS

CHAPTER 4

OPERATING STATISTICS USED FOR COMPUTING THE FY 1984 SECTION 9 APPORTIONMENTS

As discussed in Chapter 1, Section 9 funds are apportioned to urbanized areas (UZA's) on the basis of a statutory formula incorporating population, population density, and—for UZA's with populations of 200,000 or more—various operating statistics including the following:

- fixed guideway directional route miles;
- fixed guideway and "bus" (i.e., non-fixed guideway) vehicle revenue miles;
- fixed guideway and bus passenger miles; and
- fixed guideway and bus operating expenses.

4.1 DATA SOURCES

The data used for the FY 1984 Section 9 apportionments are derived from three sources:

- the 1980 U.S. Decennial Census;
- complete FY 1982 Section 15 reports, as summarized in Chapters 2 and 3 of this report; and
- supplemental FY 1982 Section 15 reports submitted in accordance with one or more of the following criteria.
 - Public agencies which were not included in the 1981 Section 15 Annual Report.
 - Private transit agencies which were under contract with a public agency but not included in the 1981 Section 15 Annual Report.
 - Public or private agency transportation services included in the 1981 Section 15 Annual Report as "purchased transportation."
 - Services provided by commuter rail and ferryboat operations which were not included in the 1981 Section 15 Annual Report.

4.2 DATA PRESENTED IN THIS CHAPTER

The transit operating statistics presented in this chapter are those used in the computation of the FY 1982 Section 9 apportionments. These statistics are presented for individual transit systems, grouped by urbanized area. Identification for each system includes UZA code, State, Section 15 identification number, and agency name. Within each UZA, systems are in sort by State and then by name.

Data are reported separately for each mode operated. Each mode is followed by a "/F" or a "/B," indicating that the mode is either a fixed guideway mode or a "bus" (non-fixed guideway) mode, respectively. Note that while motor buses generally operate in mixed traffic and are considered a "bus" mode, some systems operate motor buses in part as a fixed guideway mode (on exclusive or controlled access rights-of-way).

Modes are abbreviated as follows:

MB — motor bus;
RR — rail rapid transit;
SC — streetcar;
TB — trolley bus;
DR — demand response;
FB — ferry boat;
CR — commuter rail;
IP — incline plane;
CC — cable car;
AG — automated guideway transit;
VP — vanpool;
JT — jitney;
TR — aerial tramway.

4.3 INTERPRETATION OF THE DATA TABLE

Transit systems filing supplemental reports included some systems which had not submitted complete Section 15 reports, and some systems which had. In the latter instances, the supplemental data augmented the complete reports by reporting additional modes and services. However, some of the modes included in supplemental reports are not treated explicitly by the Section 15 uniform system of accounts and records. In addition, supplemental data in all instances represent a small subset of required Section 15 information.

For these reasons, supplemental data were not input to the main Section 15 data base, and are not included in Chapters 2 and 3. Supplemental data *were* used, however, for the Section 9 apportionments, and are included in Table 4.01.1.

Data listed under the "Original" columns of the data table represent all relevant operating statistics submitted in complete Section 15 reports. Some of these data were superseded by supplemental reports (primarily where additional purchased transportation was reported), and are included simply for informational purposes.

Data listed under the "Update" columns represent the complete set of operating statistics used in the computation of the the FY 1984 Section 9 apportionments. The sources of these data are summarized below. Note that, where supplemental 1982 data were not reported, the figures under the "Update" columns are identical to those under the "Original" columns.

Complete Report?	Supplemental Report?	"Original" Columns	"Update" Columns
Yes	No	From complete report.	Same (from complete report).
Yes	Yes	From complete report.	From supplemental report (inclusive of complete report).
No	Yes	Zeros.	From supplemental report.

Note, too, that "Original" data are reported for New Jersey Transit Corporation (ID 2080), but that zeros appear under the "Update" columns. NJTC submitted a complete consolidated Section 15 report reflecting transit service provided to multiple UZA's throughout New Jersey, including five large UZA's (population $\geq$ 200,000). For Section 9 apportionment purposes, NJTC submitted a supplemental report and allocated all relevant statistics among the five large UZA's. These apportioned data have been assigned to five separate ID numbers, and appear in the data table under the "Update" columns in the appropriate UZA's.

4.4 ALLOCATION OF DATA AMONG UZA'S

In some instances (such as NJTC), a transit system or agency provides service to two or more urbanized areas. In most of these cases, the data have been distributed among UZA's as agreed to by the adjoining jurisdictions.

Except for certain situations set forth in the legislation—related to fixed guideway services in a small UZA which serve a large UZA in a neighboring State—apportionments for small UZA's are computed strictly on the basis of 1980 population and population density. Based on the reported FY 1982 Section 15 data, such exceptions do occur in four small Connecticut UZA's; i.e., the apportionments for these four UZA's are based in part on certain commuter rail statistics. These statistics are included in Table 4.01.1.

TABLE-----004.01.01 AS OF 14-Oct-83

DATA USED FOR SECTION 9 APPORTIONMENTS

APPENDIX B

GLOSSARY

APPENDIX B

GLOSSARY

Accidents — Incidents in which there is property damage or personal injury, involving revenue or non-revenue transit vehicles or stations. Accidents are classified as "collision," "non-collision," or "station."

Charter Miles — The total miles traveled by a revenue vehicle while in charter service. It includes miles traveled while carrying passengers, plus deadhead miles.

Commuter Rail — Typically characterized as urban passenger train service for local short distance travel between a central city and adjacent suburbs. It does not include "heavy" rail rapid transit or light rail/streetcar service. Service of a predominantly intercity nature is excluded, except where a portion of it is operated under contract to a public transit agency for commuter purposes.

Controlled Access Right-of-Way (ROW) — For Section 15/Section 9 purposes, a roadway or other right-of-way is categorized as controlled if it is used during a portion of the day exclusively by transit and/or other high occupancy vehicles (HOV). (If used in this manner at all times, it is categorized as an exclusive right-of-way.)

Dial-A-Ride or Demand Responsive (DR) Vehicles — Rubber-tired passenger vehicles operated on city streets, propelled by gas, gasoline, or diesel engines, equipped to provide personal demand transit service, normally upon dispatch, and used exclusively for this service.

Directional Route Miles — (See "Miles of Directional Roadway".)

Exclusive Right-of-Way — Roadway used at all times exclusively for transit and other high occupancy vehicle operations. It may be grade-separated or controlled access roadway.

Expense Transfer — Accounts used for reporting adjustments and reclassifications of expenses previously recorded.

Ferryboats (FB) — Vessels for carrying passengers and/or vehicles over a body of water. The vessels generally are steam or diesel powered conventional

ferry vessels. They also may be hovercraft, hydrofoils, and other high-speed vessels.

FICA or Railroad Retirement — Required payments or accruals to the Federal social security or railroad retirement fund made by employees and by employers on behalf of their employees.

Fixed Guideway Modes — Any public mass transportation service which utilizes a separate right-of-way or rails. These modes include but are not limited to fixed rail, automated guideway transit, and exclusive facilities for buses and other high occupancy vehicles (i.e., motor buses on "exclusive" and "controlled access" rights-of-way). By statute, the fixed guideway category for Section 9 purposes also includes ferry boat and fixed catenary systems (e.g., trolley bus) which can share a right-of-way with other modes.

Fringe Benefits — Payments or accruals to others (insurance companies, governments, etc.) on behalf of an employee, and payments or accruals directly to an employee arising from something other than his or her performance of a piece of work.

Functional Class — As used for Section 15 purposes, an activity, area, or cost center of a transit system which incurs expenses. The four major functional classes are: vehicle operations, vehicle maintenance, non-vehicle maintenance, and general administration. Along with "Object Class," one of the two dimensions in which expenses are classified.

General Administration Expenses — All costs not associated with vehicle operations, vehicle maintenance, and non-vehicle maintenance. Typically may include such expenses as administrative wages and fringe benefits, advertising, outside professional fees, office supplies, telephone and utilities, general insurance premiums, dues, subscriptions, and travel.

Joint Expenses — Operating expenses that cannot be assigned directly to a specific mode in a multi-mode system. These expenses are distributed among modes using capacity-miles or another logical basis of assignment. Joint expenses are allocated to modes by "functional" categories, but not by "object class" categories.

Light Maintenance Facilities — Facilities used for inspecting and servicing revenue vehicles and for performing light maintenance work on those vehicles. Light maintenance includes brake adjustments, engine degreasing, tire work, minor body repairs, painting, etc.

Line Miles — (See "Miles of Directional Roadway".)

Miles of Directional Roadway — Defined as synonymous with "route miles," "line miles," and "directional route miles." The total miles over which public transportation vehicles travel while in revenue service, computed with regard to direction, but without regard to the number of traffic lanes or rail tracks existing in the right-of-way. If vehicles travel in only one direction within the right-of-way, each mile is counted once. If vehicles travel in both directions, each mile is counted twice. For example, a mile of single track over which streetcars operate in both directions represents two directional route miles. And a mile of exclusive busway on which a transit agency operates six different routes in only a single direction represents one directional route mile, regardless of the number of lanes.

Mixed Traffic Right-of-Way — Roadway or other right-of-way shared by transit and non-transit vehicles. Includes all transit rights-of-way other than those categorized as exclusive and controlled access.

Motor Buses (MB) — Rubber-tired passenger vehicles operated on city streets, propelled by gas, gasoline, or diesel engines. Class A motor buses are equipped with more than 35 seats, Class B with 25 to 35 seats, and Class C with less than 25 seats.

Non-Vehicle Maintenance Expenses — Costs associated with the inspection, maintenance, and repair of assets other than vehicles (buildings, radio equipment, shop equipment, etc.) such as maintenance wages and fringe benefits, maintenance supplies, repair materials, "outside" maintenance and repair work.

Object Class — As used for Section 15 purposes, one of two dimensions in which expenses are classified. Refers to the type of expense (wages, fringe benefits, insurance, fuel, etc.). The other category is Functional Class.

Operating Expenses — For Section 9 purposes, the total of all expenses associated with operation of an individual mode by a given operator. At the required

level, total operating expense is reported on line 14 of Form 301 for a single mode system, and is derived from Form 310 for a multi-mode system. Operating expenses include distributions of "joint expenses" to individual modes, and exclude "reconciling items" such as interest expenses and depreciation.

Other Revenue Vehicles (OR) — Other modes of transit service such as cable cars, personal rapid transit systems of varying designs, monorail vehicles, inclined railway cars, etc., not covered otherwise.

Passenger Mile — A measure of service utilization, equal to one passenger traveling in a vehicle for one mile. (For example, ten passengers riding in a vehicle for two miles equates to 20 passenger miles.)

Performance Indicators — Representations of how well an activity, task, or function is being performed. Usually computed by relating a measure of service output or utilization to a measure of service input or cost.

Rail Rapid Transit Cars (RR) — Rail cars with motive capability, driven by electric power taken from overhead lines or third rails, configured for passenger traffic and usually operated on exclusive right-of-way.

Revenue Capacity Miles (Computed) — Revenue vehicle-miles times the average passenger capacity of the active vehicles in the fleet. Average passenger capacity is determined by averaging the sum of the seated capacity and standing capacity of all active vehicles in the fleet.

Revenue Vehicles — The floating and rolling stock used in providing transit service for passengers. The term "revenue vehicles" includes the body and chassis and all fixtures and appliances inside or attached to the body or chassis, except fare collection equipment and revenue vehicle movement control equipment (radios).

Roadcalls (for Mechanical Failure) — A count of the revenue service interruptions during the reporting period caused by failure of some mechanical element of the revenue vehicle. Mechanical failures include breakdowns of air equipment, electrical units, fuel systems, engine, steering and front axle, rear axle and suspension, and torque converters. Tire failures and fare box failures are not included. These interruptions require assistance from someone other than the operator or crew to restore the vehicle to an operating condition.

Route Miles — (See “Miles of Directional Roadway”.)

School Buses — Type I and Type II school vehicles as defined in Highway Safety Program Standard No. 17, used exclusively to transport students, personnel, and equipment.

Streetcars (SC) — Relatively lightweight passenger rail cars operating singly or in short trains on fixed rails in right-of-way that is not always separated from other traffic for much of the way. Streetcars do not necessarily have the right-of-way at at-grade crossings with other traffic.

Trolleybuses (TB) — Rubber-tired, electrically powered passenger vehicles operated on city streets drawing power from overhead lines with trolleys.

Unlinked Passenger Trips — The number of passengers who board public transportation vehicles. Passengers are counted each time they board a vehicle, even though more than one vehicle may be used for a single journey from origin to destination.

Urbanized Area — An area designated by the Bureau of the Census containing a central city or cities and surrounding closely settled urban fringe (suburbs), which together have a population of 50,000 or more. Urbanized areas used in this report have been based on the 1980 Decennial Census.

Vehicle Hours — The total hours of travel by revenue vehicle including hours consumed in passenger service and deadhead travel.

Vehicle Miles — The total distance traveled by revenue vehicles, including both revenue miles and deadhead miles.

Vehicle Revenue Hours — Total number of hours that a vehicle is in revenue service. Excludes hours consumed while traveling to and from storage facilities and during other deadhead travel.

Vehicle Revenue Miles — Total miles traveled by revenue vehicles while in revenue service. Excludes miles traveled to and from storage facilities and other deadhead travel.

Vehicle Maintenance Expenses — The costs associated with the inspection, maintenance, and repair of vehicles, such as mechanics' wages and fringe benefits, maintenance supplies, repair parts, “outside” maintenance, and repair work.

Vehicle Operations Expenses — The costs associated with operating vehicles, such as operators' wages and fringe benefits, fuel, tires, and vehicle licensing.
