| Description of Concept                     |   |
| Swing type                                 |   |
| Compatibility with AAL Type "E" Coupler:   |   |
| 1. Can be added to Type "E"                | X |
| 2. Requires modification of Type "E"       | X |
| 3. Requires head adapter for Type "E"      |   |
| 4. Incompatible with Type "E"              |   |

Notes: \*This concept embodies improvements in this function.  
 \*\*Denotes potential operating or safety problem.

# Concept 450: KROFFS ELECTRICAL CONNECTOR

Primary Bibliography Reference No.: 45

Related Reference Number(s)

Description of Concept

## Compatibility with AIR Type "T" Coupler

1. Can be added to Type "T"
2. Requires modification of Type "T"
3. Requires head adapter for Type "T"
4. Incompatible with Type "T"

## CATEGORY I IMPROVE GRAIN AIR LINE SYSTEM

Pertinent Functions

1. 2. 3. 4. 5. 6. 7. 8. 9. 10. 11. 12. 13. 14. 15. 16. 17. 18. 19. 20. 21. 22. 23. 24. 25. 26. 27. 28. 29. 30. 31. 32. 33. 34. 35. 36. 37. 38. 39. 40. 41. 42. 43. 44. 45. 46. 47. 48. 49. 50. 51. 52. 53. 54. 55. 56. 57. 58. 59. 60. 61. 62. 63. 64. 65. 66. 67. 68. 69. 70. 71. 72. 73. 74. 75. 76. 77. 78. 79. 80. 81. 82. 83. 84. 85. 86. 87. 88. 89. 90. 91. 92. 93. 94. 95. 96. 97. 98. 99. 100.

## CATEGORY II IMPROVE MECHANICAL COUPLING

Pertinent Functions

1. 2. 3. 4. 5. 6. 7. 8. 9. 10. 11. 12. 13. 14. 15. 16. 17. 18. 19. 20. 21. 22. 23. 24. 25. 26. 27. 28. 29. 30. 31. 32. 33. 34. 35. 36. 37. 38. 39. 40. 41. 42. 43. 44. 45. 46. 47. 48. 49. 50. 51. 52. 53. 54. 55. 56. 57. 58. 59. 60. 61. 62. 63. 64. 65. 66. 67. 68. 69. 70. 71. 72. 73. 74. 75. 76. 77. 78. 79. 80. 81. 82. 83. 84. 85. 86. 87. 88. 89. 90. 91. 92. 93. 94. 95. 96. 97. 98. 99. 100.

- \*\* Contact life satisfactory only when connection was made without load.
- \*\* Environmental tests over electrical contacts not totally successful.

Notes: \*This concept embodies improvements in this and the  
 \*\*Denotes potential operating or safety problem.

Notes: \*This concept embodies improvements in this function.  
 \*\*Denotes potential operating or safety problem.

SUPPLEMENTAL SYSTEM DESCRIPTION  
FOR BIBLIOGRAPHY REFERENCE NO. 254

The basic operating sequence for the Walton "Electric-Pneumatic" control system (as affecting the cars being coupled/uncoupled) is:

Coupling Sequence

- 1) Electrical box covers are levered open to expose contacts.
- 2) Permanently extended circuit pins make contact.
- 3) Coupling switch is closed by complete insertion of the coupling locking hook.
- 4) Coupling solenoid is actuated and instigates the following functions (some with time delay).
  - (a) Open pilot air line valves.
  - (b) Open train air line valves.
  - (c) Open valve to provide air to electric coupler box piston (which moves the contact block forward to project the retracted contact pins to extended position in full contact).
  - (d) Exhaust air from centering device cylinders to disengage automatic centering.
- 5) Appropriate system indicators display in control cab.

Uncoupling Sequence

- 1) Uncoupling signal (electric switch from control cab or ground level of switching car) is started.
- 2) Uncoupling solenoid is actuated and instigates the following functions (some with time delay).
  - (a) Apply air to centering device cylinders.
  - (b) Close train air line valves.
  - (c) Exhaust air to electric coupler box piston (which

allows a spring loaded retraction of contact block and disconnection of all contact pins except permanently extended contact pins).

(d) Energize the uncoupling cylinder to mechanically disengage the coupler locking hooks.

3) Cars pull apart.

4) Permanently extended circuit pins break contact which instigates the following functions.

(a) Exhaust air from uncoupling cylinder to allow a spring closure of hinged locking hook ready for next coupling.

(b) Emergency brake set on the set-off car(s).

(c) Reset of all control valves.

5) Electrical box cover is closed by spring pressure when boxes are fully parted.

# Concept 301a: WILLISON TYPE II (UIC) COUPLER

Notes: \*This concept embodies improvements in this function.  
 \*\*Denotes potential operating or safety problem.

Concept 448a: OHIO BRASS FORM 8 COUPLER

Primary Bibliography Reference No.: 448

|                                                                                                                                          |   |
|------------------------------------------------------------------------------------------------------------------------------------------|---|
| Related Reference Number(s) 503                                                                                                          |   |
| Description of Concept                                                                                                                   |   |
| Rigid, non-reversible, male/female coupler (mine car application); spring actuated locking cam <u>in female coupler</u> is always ready. |   |
| Compatibility with AAR Type "E" Coupler:                                                                                                 |   |
| 1. Can be added to Type "E"                                                                                                              |   |
| 2. Requires modification of Type "E"                                                                                                     |   |
| 3. Requires head adapter for Type "E"                                                                                                    |   |
| 4. Incompatible with Type "E"                                                                                                            | X |
| CATEGORY I - IMPROVE TRAIN AIR-LINE SYSTEM                                                                                               |   |

| Description of Concept                                                  |   |
| - Same unit as WABCO train air connector described in Biblio. No. 511b. |   |
| Compatibility with AAR Type "E" Coupler:                                |   |
| 1. Can be added to Type "E"                                             | X |
| 2. Requires modification of Type "E"                                    |   |
| 3. Requires head adapter for Type "E"                                   |   |
| 4. Incompatible with Type "E"                                           |   |
| CATEGORY I - IMPROVE TRAIN AIR-LINE SYSTEM                              |   |

| Description of Concept                       | <p>Semi-rigid, discontinuous movement, "V" shaped gathering horns (on 45° slant), spring loaded latch and lock;<br/>         Uncoupling lever rotates out lock and pushes the mating latch out of lock position;<br/>         Latches and locks are spring loaded in ready position;<br/>         Uncoupling lever can be locked in open position (requires manual disengage);<br/>         "Knuckle" always open and automatic air connection.<br/>         Automatic air connector-supported below semi-rigid coupler head with automatic connection and improved performance.</p> |
| Compatibility with AAR Type "E" Coupler:     |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| 1. Can be added to Type "E"                  |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
